REPORT

TO

HIS EXCELLENCY ROBERT OFFLEY ASHBURTON, BARON HOUGHTON,

&c., &c., &c.

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honour to submit, for your Excellency's consideration, the Twenty-eighth Annual Report on Marriages, Births, and Deaths in Ireland. The tables comprise all the usual details connected with the subject for the year 1891.

GENERAL SUMMARY.

The Marriages registered in Ireland during the year 1891 number 21,475; the Births 108,116; and the Deaths 85,999. The marriage and death rates were slightly above, and the birth-rate slightly below the average for the preceding ten years.

The recorded natural increase of population, or excess of births over deaths, was 22,117: the loss by emigration amounted to 59,623; there would thus appear to have been a decrease of 37,506 in the population during the year, but against a portion of this decrease there is a set-off in immigration, of which no official record has been obtained. The estimated population in the middle of the year (founded on the Census of 1891, and the returns of Births, Deaths, and Emigration for the second quarter of the year) was 4,681,248.

TABLE I.—Showing for each of the years 1881–91, the estimated **Population**; the number of **Marriages**, **Births**, and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1881–90.

YEARS.	*Estimated Population in the middle of each year.	Numbers *Registered*.			Number of Emigrants as returned by the Enumerators.	Rate per 1,000 of Estimated Population			
		Marriages.	Births.	Deaths.		Marriages.	Births.	Deaths.	Emigrants

I append a table showing the number of Searches, &c., since the commencement of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864. It will be observed that the steady increase in the number of searches and in the number of certified copies issued noted in recent years was maintained in 1891.

TABLE II.—NUMBER of SEARCHES made; number of CERTIFICATES issued, and Amount received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 28 years 1864–91.

During the financial year ended 31st March last 434 cases were reported of offences against the Acts administered by this Department. On careful inquiry into the circumstances, in 164 cases prosecutions were ordered to be instituted against the offenders. In 69 of these the parties were convicted and punished; in 92 the proceedings were abandoned, the parties (in most instances) paying the costs of court and complying with the law; and in 3 cases the summonses were dismissed.

The cases dealt with included the following offences:—Neglect to register Births, neglect to register Deaths, neglect to furnish Certificate of Marriage, failure of Coroner to furnish Certificate of Inquest; giving false information as to age at death, as to cause of death, and as to duration of illness previous to death; giving false information as to Births, viz.—registering illegitimate children as legitimate, and misrepresenting date of birth; omitting to send notification of burial to the Registrar, &c.

The administration of the legal work of the office is, as mentioned in my Reports for 1889 and 1890, entrusted to Mr. Matheson, whose detailed statement of the business transacted will be found at page 189.

One of the cases cited by Mr. Matheson affords another illustration of the methods adopted by unscrupulous persons to secure some small pecuniary advantage by a falsification of the registers, to which I made reference in my last Report. In this instance:—

> C. P. was prosecuted at the Metropolitan Police Court for wilfully giving false information to the Registrar of South City No. 1 District, as to the age of her child, when registering its death, with the view of obtaining, from certain Societies, moneys in excess of the amount prescribed by the Friendly Societies' Acts. She was convicted, and fined £3 or six weeks' imprisonment.

Another of the cases supplies an example of the difficulties experienced by the Registrars in carrying out the provisions of the Burial Sections of the Public Health and Registration Acts. Thus:—

> M. D. was prosecuted at Emyvale Petty Sessions, as Caretaker of a Burial Ground, for neglecting to furnish to the Registrar of Glaslough District the notification of a burial required by sec. 17 of the 43 and 44 Vic., cap. 13. She was convicted and fined with costs.

MARRIAGES.

I regret to state that in 19 cases returns relating to a portion of the year 1891 have not yet been furnished by the clergy of the Church of Ireland, and in 5 instances by the Presbyterian clergy connected with the General Assembly. The number of marriages celebrated in the majority of these churches is known to have been small, and would not appreciably affect the general statistical results for Ireland, but nevertheless it is unsatisfactory to have to notice even any omissions to comply with Sec. 65 of 7 & 8 Vic., cap. 81, under which these returns are required from the clergy.

The number of Marriages registered during the year is 21,475, being equal to 1 in every 218, or 4·59 per 1,000, of the estimated population,* a rate which is ·14 over that for the previous year, and ·26 above the average for the ten years 1881–90.

Of the 21,475 Marriages registered during the year 1891, 14,697 were between Roman Catholics, 3,570 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,353 were in Presbyterian Meeting-houses; 442 in "Registered Buildings" belonging to various religious denominations; only 399 by civil contract in the Registrars' offices; 4 were according to the usages of the Society of Friends; and 10 according to the Jewish rites.

Of the 3,570 Marriages according to the rites of the Church of Ireland, 38 were by special licence, 3,013 by licence, 480 after the publication of banns, 8 on Registrar's certificate, and in 31 instances there was no information afforded as to which of these methods was adopted.

* Throughout this Report the rates for the total of Ireland are based on the estimated population in the middle of the respective years.

During the year 1891 there were issued by the Registrars 738 Licences for Marriage in Registered Buildings and in the Registrars' offices.

The number of Marriage Licences issued by the licensing Ministers of the several Presbyterian bodies is given in the following summary:—

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1891.	Number of Registered Meeting-houses on 31st December, 1891.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland, ...	145	557	2,238
2. Remonstrant Synod of Ulster, ...	7	19	43
3. Presbytery of Antrim, ...	4	8	7
4. United Presbytery or Synod of Munster, ...	2	2	1
5. Northern Presbytery of Antrim, ...	2	5	7
Total, ...	160	601	2,296

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may lawfully be solemnized without special licence, and from this it appears that, on the 31st December, 1891, there were 1,492 churches and chapels of the Church of Ireland, 601 registered Presbyterian Meeting-houses, and 359 "Registered Buildings" belonging to various religious denominations. Compared with the previous year, these numbers show a decrease of 2 as regards the Church of Ireland, an increase of 1 in the number of Presbyterian Meeting-houses, and an increase of 4 "Registered Buildings."

The following statement shows the several religious bodies having "Registered Buildings" in 1891:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists, . . .	214	Salvation Army, . .	7	United Original Seceders, .	1
Reformed Presbyterians, .	39	Christian Brethren, . .	8	"Protestant Dissenters," . .	1
Independents, . . .	25	Evangelical Union, . .	2	Non-Subscribing Christians, .	1
Baptists, ...	20	Non-Subscribing Unitarians,	1	"The Catholic Apostolic Church,"	2
Seceders, ...	10	Jews, ...	2	Independent Protestants, . .	1
United Presbyterians, .	9	Unitarians, . . .	1		
Methodists, New Connexion,	7	Covenanters, . . .	1	Total, . .	359
Moravians, or United Brethren,	7				

As more than a moiety of the annual number of Roman Catholic marriages in the provinces of Munster and Connaught are celebrated between Christmas and Shrovetide, the marriages registered in Ireland during the first quarter of the year always largely outnumber those in any of the other quarters. In 1891, the numbers recorded were—in the first quarter 6,853; in the second, 4,990; in the third, 4,811; and in the last, 4,821.

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

The marriages of bachelors and spinsters constitute 86·5 per cent. of the total; those of widowers and spinsters 8·6 per cent.; of bachelors and widows 2·7 per cent.; and of widowers and widows 2·2 per cent. Thus, 11 in every 100 of the men married were widowers, and 4·9 per cent. of the women were widows; and in 14 instances in every 100 marriages one or both of the contracting parties had been in the married state before.

TABLE V.—Showing by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1881–91, and the average number for the ten years 1881–90, distinguishing the number of Roman Catholic marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81:—

A complete registry of the exact ages of the persons married would be valuable from many points of view: hence it is matter for regret that in the great majority of instances the ages are not recorded. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1891 the ages of both parties were specified in only 4,566 instances, being little more than one-fifth of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 21,475 men married during the year, 424, or 1·97 per cent., were minors; and of the women married, 1,892, or 8·81 per cent., were under age. These proportions are considerably below the averages for the preceding ten years.

The highest proportion of husbands (2·49 per cent.) married under age in 1891, was in the province of Ulster, and in that province there was also the highest per-centage of wives (9·72), not of full age.

It may be added that the per-centage of persons married in Ireland who were under age is very far below the corresponding rates in England and Scotland.

The signatures of the contracting parties in the marriage registers or certificates afford a rough test of the progress of elementary education. In the year 1891, 17,313, or 80·6 per cent., of the husbands, and 17,303, or 80·6 per cent., of the wives, wrote their names, and the remainder signed by marke.

Printed image digitised by the University of Southampton Library Digitisation Unit

These figures, though still leaving much to be desired, contrast hopefully with the corresponding results eleven years since, the per-centage of persons married in 1881 who wrote their names being—men 78·9, and women 69·3.

The per-centages for the several provinces last year range, for men, from 73 in Connaught to 84 in Leinster, and, for women, from 77 in Ulster to 84 in Leinster.

In 2,170 instances, both of the parties married signed the register by "mark," and in 3,994 cases the register was thus signed by either the husband or the wife, so that in 6,164 instances, or 28·7 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 15,311 instances, or 71·3 per cent., *both* parties wrote their names.

The number of marriages registered in each of the eleven years 1881–91; the proportion per cent. of persons married who wrote their names in the registers; of minors, of widowers, and of widows are given in the following Table for Ireland, and for each of the four provinces.

TABLE VI.—Showing as regards the **Marriages** in Ireland and in each of the Four Provinces during the years 1881–91, the proportion per cent. of Persons who signed their **Names**, of Persons **not of Full Age**, and of **Re-marriages**. The figures for the years 1881–84 refer to Registration Provinces; those for 1885–91 to the Provinces Proper.

In proportion to the estimated population at all ages, the registered marriages were most numerous in the province of Ulster, in which, however, the rate was only 5·2 per 1,000 of the population in 1891; Leinster comes next, with 5·0 per 1,000; Munster third, with 4·0 per 1,000; and Connaught last, the rate being 3·3 per 1,000.

The highest rate for any county was 7·6 per 1,000 of the population in 1891, which was the marriage rate for Antrim; and the lowest 3·0 per 1,000, for Galway. Between these, the most favourable were 7·0 for Dublin, and 5·2 for Down; and the least so 3·1 for Meath, and 3·2 for Mayo and Sligo.

BIRTHS.

The number of births registered during the year 1891 was 108,116—55,476 boys and 52,640 girls, or 105·4 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 43·3, or 23·1 per thousand, which is 0·3 under the low average rate for the ten years, 1881–90.

Of the 108,116 children whose births were registered in Ireland during the year 1891, 105,216, or 97·3 per cent. were legitimate, and 2,900, or 2·7 per cent., were illegitimate: these were also the average per-centages for the preceding 10 years. It is unnecessary to say that these results compare very favourably with the returns for most other countries.

Of the children born in wedlock during the year, 54,002 were males, and 51,214 females, being 105·4 of the former to every 100 of the latter, and of the illegitimate children 1,474 were males, and 1,426 females, or 103·4 boys to 100 girls.

Comparing the provinces, we find that the per-centage of children born in Ulster, who were illegitimate, was 4·0; in Leinster, 2·4; in Munster, 2·2; and in Connaught, 0·7.

TABLE VII.—The Per-centage of Legitimate and of Illegitimate Births registered in Ireland during the years 1887–91, by Provinces.

Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.				
	1887.	1888.	1889.	1890.	1891.	1887.	1888.	1889.	1890.	1891.
IRELAND, . . .	97·2	97·1	97·2	97·3	97·3	2·8	2·9	2·8	2·7	2·7
LEINSTER, . . .	97·7	97·5	97·5	97·5	97·6	2·3	2·5	2·5	2·5	2·4
MUNSTER, . . .	97·8	97·8	97·8	97·8	97·8	2·2	2·2	2·2	2·2	2·2
ULSTER, . . .	95·4	95·8	95·8	96·0	96·0	4·6	4·4	4·4	4·0	4·0
CONNAUGHT, . . .	99·4	99·3	99·3	99·2	99·3	0·6	0·7	0·7	0·8	0·7

The respective total birth-rates for the provinces in 1891 were—Leinster, 23·0 per 1,000 of the population in 1891; Munster, 22·2; Ulster, 24·0; and Connaught, 22·0.

The four counties having the highest rates are Antrim, 29·1 per 1,000 of the population in 1891; Dublin, 27·4; Down, 26·2; and Armagh, 23·7. Those with the lowest rates are—Monaghan, 18·5; Fermanagh, 18·8; Meath, 19·1; and Cavan, 19·2.

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

Of the total births, 53·2 per cent. were registered in the first six months of the year (181 days), and 46·8 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 28,442; in the second, 29,101; in the third, 25,872; and in the fourth, 24,701.

DEATHS.

The deaths registered during the year amount to 85,999, being equal to 1 in 54·4 or 18·4 per 1,000 of the estimated population. The deaths of males number 42,090, and those of females 43,909, the former being equal to 18·2 in every 1,000 males living, and the latter representing 18·5 per 1,000 females.

As already stated the death-rate (18·4) was somewhat over the average rate for the preceding ten years, which was 17·9 per 1,000.

As usual, very many of the Registrars furnished at the close of each quarter valuable notes on the sanitary condition of their respective districts. These notes were embodied in the Quarterly Returns issued from this department, and emanating as they did, from gentlemen qualified to speak decisively on the subject, it is to be hoped that they received the serious attention of the various Local Authorities intrusted with the administration of the Public Health Acts.

With respect to the death-rates for the four provinces, the rate for Connaught is only 15·2; that for Munster is 17·2; for Ulster, 19·3, and for Leinster, 19·8 per 1,000 of the population in 1891.

Of the thirty-two counties, the four having the lowest registered mortality are—Kerry, 14·0 per 1,000; Sligo, 14·2; Clare, 14·9; and Roscommon, 15·0.

Those in which the rate was highest are—Dublin, 24·6; Antrim, 22·4; Armagh, 20·4; and Down, 20·3.

The deaths registered in the first half of the year generally outnumber those in the second. In 1891, 55·3 per cent. of the total deaths were registered in the six months, January to June inclusive, and only 44·7 per cent. in the remaining six months of the year.

The annual rates represented by the deaths registered in each quarter are as follow:—First quarter, 21·4 per 1,000 of the population; second, 19·2; third, 14·6; and fourth, 18·3.

From the Table on pp. 168–177 *it will be seen that, of the* 85,999 *deaths registered during the year,* 2,132 *took place in Infirmaries and General and Special Hospitals;* 886 *in Public Lunatic Asylums;* 10,178 *in Workhouses and Workhouse Hospitals; and* 72,803 *were of persons who died "At their Own Homes, &c." As in former Reports a Table (see pages* 178–9) *is given showing like information for those Registrars' Districts in which the principal Urban Sanitary Districts in Ireland are situated.*

The deaths in "Infirmaries and General and Special Hospitals" constitute 2·5 per cent. of the total number, the per-centages for the four provinces varying from 0·3 in Connaught to 6·1 in Leinster. Twelve per cent. of the deaths registered occurred in Workhouses or Workhouse Hospitals, the respective per-centages for the provinces being —Leinster, 13·7; Munster, 18·1; Ulster, 7·4; and Connaught, 8·9.

I.—SPECIFIC FEBRILE OR ZYMOTIC DISEASES.

The number of deaths from Specific Febrile or Zymotic diseases registered during the year 1891 was 6,415, or 137 in every 100,000 of the estimated population, being 1,477, or 19 per cent. under the number for the preceding year, much below the average for the ten years, 1881-90, and lower than the number for any of those years.

Of the 6,415 deaths from zymotic diseases 3,285, or 51·2 per cent., were amongst children under 10 years of age.

The deaths from the eight principal zymotic diseases* registered during 1891 form 5·6 per cent. of the deaths from all causes, and are equal to 103 in every 100,000 persons living; the average annual mortality from the same diseases in the preceding 10 years represented 8·0 per cent. of the average number of deaths from all causes, and was equal to 144 deaths in every 100,000 of the estimated mean population.

* Small-pox, Measles, Scarlet Fever, Diphtheria, Whooping-cough, Fever, Diarrhœa (and Dysentery), and Cholera.

Small-pox.—Seven deaths from small-pox were registered during the year, 6 of which occurred in Ulster and 1 in Connaught. In the two years preceding no fatal

* The rates for the total of Ireland are based on the estimated population in the several years, those for the Provinces on the population according to the Census, the rates for the years, 1885–6, being founded on the 1881 population, and those for the years 1887–91 on the population by the Census of 1891.

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

cases of the disease were recorded; the average annual number for the ten years 1881–90, was 24 only; and of the total number (241) registered during that period 201 occurred during the first two years, so that in late years deaths from Small-pox have been of very rare occurrence in Ireland.

Measles.—There were but 240 deaths from Measles registered, being 486 under the number for the preceding year; 703 below the average for the ten years, 1881–90, and the lowest number in any year since registration was established in 1864. More than one half of the total number occurred in the province of Connaught, where there were 131 deaths from this cause, (50 of which, equal to 1·8 per 1000 of the population at all ages, occurred in Claremorris Union). In Leinster there were only 11, in Munster 22, and in Ulster 76.

Scarlet Fever.—The mortality for Scarlet Fever also, was lower than in any previous year since the introduction of registration, the number of deaths being 308 only, being 923, or 70 per cent. below the average for the ten years 1881–90, and 11 under the low number for the last year of that period. Of the 308 deaths registered last year, 19 occurred in Leinster, 36 in Munster, 180 in Ulster, and 73 in Connaught, the last number including 21 in Roscommon union.

Diphtheria.—There were only 281 deaths from diphtheria registered, being 65 under the number for the preceding year, and 66 under the average for the ten years 1881–90. The 281 deaths consist of 58 in Leinster (including 19 in the South Dublin union), 48 in Munster (14 of which were in Cork union, and 11 in Kilmallock union), 145 in Ulster (including 34 in Belfast union, 12 in Lurgan union, and 12 in Magherafelt union), and 30 in Connaught. In Ulster the rate represented by deaths from diphtheria was 9·0 per 100,000 of the population, and in Connaught, 4·1.

Whooping-cough.—Deaths from this disease, which had risen from 1,259 in 1888 to 1,481 in 1889, and to 1,493 in 1890, fell last year to 1,280, or 27·3 per 100,000 of the population, being 1·8 under the average rate for the ten years 1881–90. The 1,280 deaths in 1891 were distributed as follows:—337 in Leinster (including 76 in the North, and 88 in the South Dublin union), 341 in Munster (including 50 in Cork union, and 48 in Waterford union), 554 in Ulster (of which 176 were in Belfast union, where during the year 1890 the disease caused 314 deaths, and 44 in Lurgan Union), and 48 in Connaught. The respective rates for the four provinces were—Leinster, 28·4 per 100,000 of the population; Munster, 29·1; Ulster, 34·2; and Connaught, 6·6.

Fever.—The total number of deaths from the several forms of continued fever was 1,308, being 169 under the number for the preceding year, and 499 below the average for the ten years 1881–90. The rate represented by the deaths for last year was 27·9 per 100,000 of the population, against an average of 36·7 for the preceding ten years, showing a diminution in the mortality rate equivalent to a decrease of 24 per cent. The deaths from "fever" in Leinster were equal to 32·4 per 100,000 of the population; in Munster the rate was 26·0 per 100,000; in Ulster, 26·9; and in Connaught, 25·1.

The 1,308 deaths from "fever" consist of 266 from typhus (being 125 under the number for 1890, and far below the average for the ten years 1881–90), 859 from enteric fever being 4 over the number for 1890, and somewhat above the average), and 183 from simple continued and ill-defined fever. Enteric fever was again prevalent in Belfast and Dublin, in the former it was less fatal than either of the two years preceding, but in Dublin the mortality although not as heavy as in the year 1889, was somewhat greater than that for the year 1890. The respective numbers for Belfast union were 236 deaths in 1889, 190 in 1890, and 156 in 1891, and for the two unions of Dublin North and Dublin South 231 in 1889, 168 in 1890, and 185 in 1891.

In proportion to the living at the same age, "fever" was most fatal at the age-periods 20 and under 25 years and 25 and under 35, for the former of which the rate was 39·37 per 100,000 and for the latter 34·61, and least so amongst persons aged 75 and upwards, the rate being 10·97 per 100,000.

Erysipelas.—The number of deaths from erysipelas was 170, being 14 over the number for the preceding year, but 72 under the average for the ten years 1881–90.

Puerperal Fever.—There were only 236 deaths from this disease registered, being 89 below the average for the preceding ten years, and 16 under the number for the year 1890.

Influenza.—This disease, which, ordinarily, causes but few deaths in Ireland, proved fatal in 1,712 cases in the year 1890, and caused 891 deaths (386 males and 505 females) in 1891. The 891 deaths in 1891 comprise 130 of children under 10 years of age, and 468 of persons aged 55 years and upwards. In the province of Leinster the influenza death-rate in 1891 was 1·0 per 10,000 of the population; in Munster, 1·5; in Ulster, 3·3; and in Connaught, 0·9. The county rates range from 0·2 per 10,000 in Westmeath to 5·2 in Down.

The Table (XII.) on the opposite page shows, by Sexes and Age-Periods, the distribution of the deaths from influenza through the several counties.

Diarrhœa and Dysentery.—The mortality from these diseases, although not as low as in the year 1890, was below the average, the number of deaths being 1,303, or 27·8 per 100,000 living, against an average of 1,443, or of 29·3 per 100,000 for the ten years 1881-90.

The rate for Leinster in 1891 was 30·9 per 100,000 of the population; for Munster, 24·2; for Ulster, 33·2; and for Connaught, 15·9. Of the 367 deaths from diarrhœa and dysentery in the province of Leinster, 214 occurred in one or other of the two unions of Dublin North, and Dublin South; and of the 537 deaths in Ulster, 267 were registered in Belfast union.

Simple Cholera.—Seventy deaths were ascribed to this disease, viz.:—18 in Leinster, 17 in Munster, 34 in Ulster, and 1 in Connaught.

Five males and 1 female died from *Hydrophobia.*

II.—Parasitic Diseases.

There were only 60 deaths from diseases of this class.

III.—Dietetic Diseases.

The deaths from dietetic diseases number 142; they comprise 131 from intemperance, 35 of which (34 males and 1 female) were caused by delirium tremens, and 96 (78 males and 18 females) come under the head of chronic alcoholism. The number of deaths from intemperance registered in the preceding year was 143.

IV.—Constitutional Diseases.

From diseases termed "constitutional" there resulted 16,123 deaths (7,669 males and 8,454 females), affording a rate of 1 in 5·3 of all the deaths, and equal to 344 in every 100,000 of the population.

Phthisis or Pulmonary Consumption caused 10,038 deaths (4,654 males and 5,384 females) being equal to 214·4 in every 100,000 persons, against an average annual rate of 209·8 per 100,000 for the previous ten years.

As heretofore, Leinster and Ulster yield the highest rates, and Connaught the lowest. The rates for the four provinces are as follow:—Leinster, 240 per 100,000 of the population; Ulster, 228; Munster, 199; and Connaught, 158.

Of the 3,701 deaths from phthisis in Ulster, 1,133 occurred in Belfast union, the number being equal to 391 per 100,000 of the population, and the 2,854 fatal cases of the disease in Leinster comprise 1,241, or 355 per 100,000 of the population, registered in the unions of Dublin North and Dublin South.

Of the total number of deaths from phthisis in Ireland, 7,397, or 74 per cent., were of persons aged 15 and under 45 years of age.

Mesenteric Disease.—The deaths from mesenteric disease number 950—473 males and 477 females.

Gout.—Only 32 deaths from gout were registered (19 males and 13 females).

Cancer.—There were 2,163 deaths (988 males and 1,175 females) tabulated under this heading, against an average of 2,004 for the ten years 1881-90.

The following Table shows, by Sexes and Ages-periods, the deaths from Cancer registered during the year 1891, arranged according to the part of the body affected by the disease, in so far as that information was contained in the Returns; also the number of deaths to 100,000 of the living at same age. In 138 instances the organ or portion of the body affected was not stated, and it will be observed that 555 of the classified cases were deaths from cancer of the stomach, and that 254 females died from cancer of the breast, and 144 from cancer of the uterus. The Table shows also the total deaths from cancer in each of the ten years, 1881-90, arranged by Age-periods.

V.—Developmental Diseases.

The deaths in this class amount to 18,106, of which 17,641 (7,956 males and 9,685 females), or 20·5 per cent. of the deaths from all causes, were ascribed to "old age." Of the remaining 465 deaths, 375 are tabulated under the head of "premature birth"; 15 were caused by atelectasis, 15 by cyanosis, 35 by spina bifida; &c.

VI.—Local Diseases.

The number of deaths from "local diseases" registered amounted to 37,453 (18,962 males and 18,491 females), or 43·6 per cent. of the deaths from all causes.

Diseases of the Nervous System.—From this group of diseases there resulted 7,908 deaths—4,104 males and 3,804 females. They include 2,398 from convulsions (nearly all children), 1,632 tabulated under the head of "hemiplegia, brain paralysis"; 1,250 from apoplexy; 871 from inflammation of the brain or its membranes, 329 from epilepsy, 433 from insanity (general paralysis of the insane), 5 (all females) from chorea or St. Vitus's dance, 235 from softening of the brain, &c.

Diseases of the Circulatory System.—Diseases of the circulatory system caused 6,375 deaths—3,201 males and 3,174 females.

*Diseases of the Respiratory System.**—The deaths from these diseases last year amount to 16,194, 8,122 males and 8,072 females—or 345·9 in every 100,000 of the population, against an average of 15,328 or 311·4 per 100,000 of the estimated mean population for the ten years, 1881–90, and higher than the rate for any of those years. The respective rates for the Provinces, in 1891, are Leinster, 355·0 per 100,000 persons; Munster, 333·7; Ulster, 370·3; and Connaught, 285·2.

Of the 16,194 deaths from these causes 10,771 (5,001 males and 5,770 females), resulted from bronchitis, against 9,567 from that disease in the preceding year; 3,431 (2,095 males and 1,336 females) were from pneumonia or inflammation of the lungs; 638 from croup; 509 from asthma and emphysema; 189 from pleurisy; 101 from laryngitis, &c.

Diseases of the Digestive System.—These diseases caused 4,303 deaths (2,169 males and 2,134 females), including 401 from enteritis or inflammation of the bowels; 371 from peritonitis or inflammation of the covering of the bowels; 406 from ileus or obstruction of the bowels; 125 from hernia; 12 (10 males and 2 females) from fistula; 246—163 males and 83 females—from cirrhosis of liver; &c.

Diseases of the Urinary System.—To the various affections of this order of diseases 1,491 deaths (1,026 males and 465 females) were ascribed. Of these deaths, 619 (380 males and 239 females) were from Bright's disease, 176 from acute nephritis or inflammation of the kidneys; 31 from ischuria or suppression of urine; 20 from stone in the bladder; 45 from uræmia, &c.

The remaining deaths from Local Diseases comprise 62 from *Diseases of the Lymphatic System and of Ductless Glands*; 603 from Diseases of the *Reproductive System* (including 182 from diseases of the Organs of Generation, and 421 from the Accidents of Childbirth), 229 from *Diseases* of the *Locomotive System*; and 235 from *Diseases of the Integumentary System.*

VII.—Violent Deaths.

The number of violent deaths registered during the year is 1,897 (1,281 males and 616 females), or 40·5 in every 100,000 of the population, being slightly over the average rate for the ten years 1881–90. Accidents or negligence caused 1,696 of these deaths (including 384 from burns or scalds and 350 from drowning); there were 90 cases of homicide (murder and manslaughter), and 110 of suicide, and one man was executed. By agreement with the Registrar-General for England a modification of the classification of deaths from accidents or negligence was made in 1891, and the tables relating to the subject appended to this Report have been compiled according to the new arrangement.

Inquests.—There were 2,111 inquests reported to the Registrars during the year 1891, being 1 inquest to every 41 deaths registered.

AGES.

Deaths of infants under 1 year old numbered 10,252, being equal to 9·5 per cent. of the number of births registered.

Amongst children under 5 years of age 16,330 deaths occurred—a mortality equal to 34·7 in every 1,000 of the estimated number of the living at that age. Of these, 8,782 were boys and 7,548 girls; the former number representing 36·8 in every 1,000 boys, and the latter 32·6 in every 1,000 girls under 5 years old.

* Exclusive of Phthisis, or Pulmonary Consumption, for which see "Constitutional Diseases."

Printed image digitised by the University of Southampton Library Digitisation Unit

Printed image digitised by the University of Southampton Library Digitisation Unit

The deaths of persons aged 65 years and upwards are equivalent to 10·5 per cent. of the living at that age.

Among the deaths registered are 728 of persons stated to have been aged 95 years or upwards—344 males and 384 females; of these 176 (88 males and 88 females) were returned as having been 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable, but secondary inquiries having been made as regards persons returned during the year 1890 as centenarians, it was found, in almost every instance, that so far as the Registrars could ascertain the age was correctly stated.

EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants who left Ireland during the year 1891 amounted to 59,623; of these 30,046 were males and 29,577 were females. Of the whole number, 9,276 were from the Province of Leinster; 24,678 from Munster; 13,264 from Ulster; and 12,405 from Connaught.

Of the total emigrants from Ireland in 1891, 9·5 per cent. were under 15 years of age; 82·6 per cent. were between 15 and 35 years old; 7·9 per cent. were 35 or upwards; and in 2 instances, the ages were not specified.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf in Dublin was 6¾*d.** Oatmeal (1st quality) averaged 15*s.* 5*d.* per cwt. in Dublin, being 2*d.* over average price for 1890; the average prices of potatoes in Dublin ranged from 3*s.* 6*d.* to 4*s.* 2*d.* per cwt., against 2*s.* 7*d.* to 3*s.* 3*d.* in 1890; and those of beef from 49*s.* 6*d.* to 61*s.* 6*d.* per cwt., against 50*s.* 6*d.* to 62*s.* in 1890.

TABLE XIV.—AVERAGE PRICES in DUBLIN of BREAD, OATMEAL, POTATOES, and BEEF, during the years 1881–91, and the AVERAGE NUMBER of PERSONS in IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES of PROVISIONS and the AVERAGE NUMBER of PERSONS in RECEIPT of RELIEF during each quarter of the year 1891.

* Prices for the years 1881–7, and the first two quarters of 1888, were derived from Returns furnished by Messrs. Menders & Co., those for the third and fourth quarters of 1888 and for the years 1889, 1890, and 1891, from Returns received from "Bolands, Limited," and Messrs. Johnston & Co. (or Johnston, Mooney, and O'Brien, Limited)—the prices quoted for these two firms including delivery.

† Compiled from Returns furnished by the Local Government Board.

Printed image digitised by the University of Southampton Library Digitisation Unit

Printed image digitised by the University of Southampton Library Digitisation Unit

Surveying the period covered by the several Tables in this Report, *i.e.*, 1891, and the ten years preceding, it is found that beef was lowest in the year 1887, when the average prices ranged from 44*s.* to 53*s.* 6*d.* per cwt.; oatmeal was cheapest in 1889, when the average price was 13*s.* 7*d.* per cwt.; and potatoes, in 1888, when the average range of prices was from 2*s.* 2*d.* to 2*s.* 9*d.* per cwt. The highest average price of oatmeal was 17*s.* 6*d.* in 1884 and 1885; the highest range for potatoes, 3*s.* 9*d.* to 4*s.* 10*d.* per cwt. in 1883, and for beef, 66*s.* 6*d.* to 77*s.* per cwt. in 1883.

From Returns, for which I am indebted to the Local Government Board, it appears that the average number of workhouse inmates in Ireland on Saturdays during the year 1891 was 41,744, being 1,265 under the average for the preceding year; and that the average number of persons receiving out-door relief was 62,528, or 447 over the corresponding number for 1890.

THE WEATHER.

The following particulars and those given on pages 22–42, which are inserted by the kind permission of the Editor of the Dublin Journal of Medical Science, have been derived from Returns of Meteorological Observations taken in Dublin City during the years 1871–91, by J. W. Moore, Esq., M.D., F.R.C.P.I., F.R. MET. SOC.; and published in the Journal during the years 1891–92. The Tables on pages 180–182 also, are founded on Dr. Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least one-hundredth (·01) of an inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1891 was 29·909 inches. The highest observed reading was 30·875 inches at 9 P.M. on January 14th. The lowest observed reading was 28·251 inches, at 3·30 P.M. on October 13th. The extreme range of atmospherical pressure was 2·624 inches compared with 2·051 inches in 1890.

The *Mean Temperature* of the year, deduced from the arithmetical mean of the maximal and minimal readings of the thermometer in the shade was 49·3°. The highest reading was 75·6° on September 10th; the lowest reading was 23·9° on January 7th. The average mean temperature for the years 1871–90 calculated in the same way, was 48·6°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 48·5°.

Rain fell on 184 days, including snow or sleet on 14 days, and hail on 25 days. The average number of rainy days in the years 1871–90 was 199·6. The total rainfall measured 27·820 inches compared with an average of 28·303 inches in the twenty years 1871–90. During the first half of 1891 (January to June, inclusive) the rainfall was 8·748 inches on 77 days; during the second half (July to December, inclusive) 19·072 inches fell on 107 days.

As regards the *Direction of the Wind*, 730 observations were made during the year, with this result—N., 49; N.E., 54; E., 53; S.E., 55; S., 84; S.W., 125; W., 178; N.W., 86; Calms, 46.

I have the honour to be

Your Excellency's faithful servant,

THOS. W. GRIMSHAW,

Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
Dublin, 20th December, 1892.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1891.

By J. W. MOORE, Esq., M.D., F.R.C.P.I., F.R. MET. SOC.

(Extracted from the *Dublin Journal of Medical Science.*)

JANUARY.—The period of cold which was ushered in by the phenomenal snowstorm of November 27, 1890, lasted, with slight and temporary intermissions, until the 23rd of January, when the southwesterly type of weather became permanently established over Western Europe, strong S. to W. winds, high but variable temperature, and frequent showers prevailing day after day to the end of the month. To this decided change is due the fact that the mean temperature was only 1·3°. below the average, notwithstanding the cold of the first three weeks of the New Year.

In Dublin the arithmetical mean temperature (40·1°) was decidedly below the average (41·4°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 39·5°. In the twenty-five years ending with 1889, January was coldest in 1881 (M. T. = 32·2°), and warmest in 1875 (M. T. = 46·6°). In 1867 the M. T. was 35·7°, and in 1865 it was 37·8°. In 1871 and in 1886 the M. T. was 37·9°; in the year 1879 (the "cold year") it was 35·3°. In 1888, the M. T. was 42·1°; in 1889 it was 42·4°, and in 1890 it was 44·5°. As a general rule, January in Dublin is not colder, but rather a shade warmer, than December. This is owing to the full development in January of a winter area of low pressure over the Atlantic, to the north-westward of the British Isles, and to a resulting prevalence of S.W. winds in their vicinity. January, 1891, proved no exception to this rule, the M T. being 0·9° above that of December, 1890, (39·2°).

The mean height of the barometer was 30·085 inches, or 0·211 inch above the average value for January—namely, 29·874 inches, and as much as 0·345 inch above the mean for January, 1890—namely, 29·740 inches. The mercury rose to 30·875 inches at 9 p.m. of the 14th, and fell to 29·337 inches at 9 a.m. of the 23rd. The observed range of atmospherical pressure was, therefore, as much as 1·538 inches—that is, a little more than one inch and a half.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 39·5°, or 0·6° above the value for December, 1890. Using the formula, *Mean Temp.* = *min.* + (*max.*—*min.* × ·52), the M T. becomes 40·2°, compared with a twenty-five years' average of 41·5°. The arithmetical mean of the maximal and minimal readings was 40·1° compared with a twenty-five years' average of 41·4°. On the 26th and 28th the thermometer in the screen rose to 53·7°—wind, S.W.; on the 7th the temperature fell to 23·9°—wind, W. The minimum on the grass was 19·8° on the last-named date.

The rainfall was only ·672 inch, distributed however over 14 days. The average rainfall for January in the twenty-five years, 1865–89, inclusive, was 2·200 inches, and the average number of rainy days was 17·3. The rainfall and the rainy days, therefore, were both considerably below the average. In 1877 the rainfall in January was very large—4·322 inches on 25 days; in 1869, also 4·258 inches fell—on, however, only 18 days. On the other hand, in 1876, only ·406 of an inch was measured on but 9 days; and in 1880, the rainfall was only ·563 of an inch on but 8 days. In January, 1886, 3·244 inches of rain were measured on as many as 26 days; in 1887 ("the dry year"), 1·816 inches fell on 16 days; in 1888 1·247 inches on 9 days; and in 1889, 2·213, inches on 16 days; and in 1890, 2·075 inches on 21 days.

Solar halos were seen on the 18th and 31st. Lunar halos were seen on the 18th, 19th, and 23rd. The atmosphere was foggy on each of the first two days, as also on the 6th, 9th, 10th, 12th, 13th, and 31st. High winds were noted on 13 days, reaching the force of a gale on two days—the 20th and 31st. Hail fell on the 17th, and 24th, and snow or sleet on the 19th and 21st. Temperature exceeded 50° in the screen on only 5 days, compared with 17 days in January, 1890, and 8 days in January, 1889; while it fell to or below 32° in the screen on 7 nights, compared with 1 night in January, 1890, and 3 nights in January, 1889. The minima on the grass were 32°, or less, on 21 nights, compared with 15 nights in January, 1890, and 16 nights in January, 1889.

At the beginning of the month the cold was less intense and the air softer and moister than for a long while previously. Friday, the 2nd, was in Dublin gloomy in the extreme, damp, and foggy, and next day a decided westerly current prevailed.

The week ending Saturday the 10th, was the coldest week yet experienced in Dublin during the present severe weather. It is true there was no steady frost, but temperature was usually low and at times extremely so. Early in the week, a depression travelled southeastwards across the south of Scandinavia, Denmark, and Germany, while an anticyclone passed slowly in the same direction over the British Islands. The northerly and north-easterly winds of the latter system were peculiarly dry and searching, so that in Dublin at 9 a.m. on Tuesday, the 6th, the relative humidity was only 61 per cent. Frost set in during the afternoon of this day, and at 9 a.m. on Wednesday the thermometer stood at 24° in the screen in Dublin, having been down to 17° at Parsonstown earlier in the morning. A curious V-shaped depression now came in from the Atlantic, causing strong S.W. and S. winds and heavy rain in the south of Ireland—only a few drops of rain fell in Dublin. Next day a new high pressure system appeared, and frost returned, with fog. Saturday morning was calm, foggy, and very cold; but a brisk S.W. to S. wind sprang up in the afternoon and temperature rose quickly. In Dublin the mean height of the barometer was 30·249 inches. The corrected mean temperature was 35·4°—the mean dry bulb temperature at 9 a.m. and 9 p.m. was 34·3°. On Sunday the thermometer rose in the screen to 43·4°, and on Wednesday it sank to 23·9. Rain fell on Sunday to the amount of ·010 inch.

Printed image digitised by the University of Southampton Library Digitisation Unit

Although temperature was not so low as in previous weeks, the weather of the period ending Saturday the 17th was wintry and inclement on the whole. The most striking feature of the week was the existence of a great anticyclone over Ireland and the Atlantic to the westward of this country from Tuesday to Thursday, inclusive, at a time when a deep depression, with readings of the barometer as low as 29·00 inches, was passing southeastwards across the Scandinavian Peninsula and the Baltic. This anticyclone attained its fullest proportions on Wednesday evening, when the barometer read 30·97 inches at Belmullet, 30·94 inches at Valentia Island, 30·92 inches at Mullaghmore, 30·88 inches at Parsonstown and in Dublin. At Valentia Island the absolute maximal pressure recorded was 30·967 inches at 10·55 a.m. on the 14th. These were the highest pressure-readings recorded in Ireland since January 18, 1882, when the barometer rose to 30·935 inches at 10·30 p.m. in Dublin. A strong, mild S.W. wind blew on Sunday, but the upper current (cirrus cloud) was northerly. Temperature became very changeable after this, and rather low temperatures occurred at night. Very raw, damp, showery weather prevailed from Thursday to the end; but bitter cold again set in over the Continent generally on Friday. In Dublin the mean height of the barometer was 30·606 inches, pressure ranging from 30·875 inches at 9 p.m. of Wednesday (wind, N.), to 30·261 inches about 3 p.m. of Friday (wind, N.N.W.) The corrected mean temperature was 40·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 39·0°. The rainfall was ·124 inch on three days. Hail fell on Saturday the 17th.

Although intense cold prevailed very generally at the beginning of the period ending Saturday the 24th, a considerable recovery of temperature took place as the week wore on, and for the first time since November, 1890, the usual winter cyclonic distribution of pressure was fully established over the Atlantic off the West and North-west of Europe. On Sunday and Monday very severe frost held over England, as well as over central and southern Europe—at 8 a.m. of Sunday, the 18th, the thermometer read 11° at York, 14° at Loughborough, and 15° at Oxford; even in Dublin, where a fresh southerly wind was blowing, frost prevailed and the air was unusually dry and searching, relative humidity being only 52 per cent. Next morning the readings of the thermometer were 8° at Loughborough, 12° at Oxford, 16° at Cambridge, and 18° at York. A great change now set in, having been heralded by much cirriform cloud and solar and lunar halos on Sunday and Monday. At 8 a.m. of Tuesday a depression had its centre (28·95 inches) near the Shetlands, and was causing moderate or fresh gales from S.W. to W. in many parts of the British Islands. On Friday a still deeper depression (28·79 inches) advanced to the same region from S.W. These disturbances threw the weather into a very unsettled state, and frequent showers, with squalls and shifting temperature, were reported from most British stations. In Dublin the mean height of the barometer was 29·715 inches, or ·891 inches below the corresponding value for the previous week—30·608 inches. Pressure ranged between 30·447 inches at 9 a.m. of Sunday (wind S. by E.), and 29·337 inches, at 9 a.m. of Friday (wind, W. by S.) The corrected mean temperature was 38·6°—the mean of the dry bulb readings at 9 a.m. and 9 p.m. being 38·5°. The screened thermometers rose to 53·6° on Friday. Rain was measured on five days—the total quantity being ·307 inch, of which ·181 inch was registered on Tuesday—the maximal daily fall for the month.

The south-westerly type of weather persisted through the last week (25th–31st) all over the North-west of Europe—that is, successive deep depressions travelled north-eastwards along the western coasts of Ireland, Scotland, and Norway, while numerous secondary depressions passed in the same direction across the British Islands and North Sea. Hence, temperature was unstable but usually high for the time of year, strong S.W. and W. winds prevailed, and rain fell frequently. In the East of Europe, on the contrary, conditions were anticyclonic, and very cold weather was reported, the thermometer reading—18° at Moscow on the mornings of Tuesday and Wednesday. On the night of Friday, the 30th, a depression rapidly approached Ireland from S.W., causing a violent gale from S. to W.S.W. during the early morning hours of Saturday, the 31st. The storm was accompanied by heavy showers at times. Rain fell abundantly in the South of England during the week. In Dublin the mean height of the barometer was 29·740 inches. The corrected mean temperature was 46·0°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 45·3°. The screened thermometers rose to 53·7° on Monday and also on Wednesday, having fallen to 36·8° on Sunday. The rainfall amounted to ·188 inch on three days. The prevailing wind was S.W.

In Dublin, the rainfall up to January, 31, 1891, has amounted ·672 inches on 14 days, compared with a twenty-five years' (1865–1889) average of 2·200 inches on 17·3 days.

At Knockdolian, Greystones, Co. Wicklow, 1·275 inches of rain fell in January, on 15 days. The heaviest falls in 24 hours were ·360 inch on the 20th, ·180 on the 26th, and ·160 inch on the 30th.

FEBRUARY.—February, 1891, proved a record month for drought, mildness, calm, and fogginess combined. Day after day and week after week an anticyclone lay over Central Europe and the southern half of the British Islands, whereas conditions were cyclonic both in Northern Europe and in the Mediterranean Basin. Calms and fog, or light variable winds prevailed in the anticyclonic area, where also the weather was almost rainless from beginning to end of the month. The S.W. wind on the western edge of the high pressure system raised the temperature in Ireland, but it was low in the S.E. of England owing to calm and fog. Towards the close the diurnal range of temperature in Central England became extraordinary, in consequence of the dispersal of the fog, the dryness of the air, and the absence of cloud by day and night.

In Dublin the mean temperature (44·7°) was 1·9° above the average (42·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 43·6°. In the twenty-five years ending with 1889, February was coldest in 1873 (M. T. = 37·9°), and warmest in 1869 (M. T. = 46·7°). In 1886 the M. T. was 39·7°. In the year 1879 (the cold year) it was 40·1°. In 1888 it was as low as 38·6°, in 1889 it was 40·3°, and in 1890 it was 41·5°.

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

The mean height of the barometer was 30·398 inches, or 0·543 inch above the average value for February—namely, 29·855 inches. The mercury rose to 30·725 inches at 0 a.m. of the 5th, and fell to 29·824 inches at 3 p.m. of the 26th. The observed range of atmospherical pressure was, therefore, 0·901 inch—that is, a little over nine-tenths of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 43·6°, or 4·1° above the value for January, 1891. Using the formula *Mean Temp.=min.* + (*max.—min.* × ·50), the M.T. becomes 44·7°, compared with a twenty-five years' average of 42·8°. On the 23rd the thermometer in the screen rose to 61·9°—wind, S.; on the 9th the temperature fell to 30·1°—wind, W.S.W. The minimum on the grass was 25·5° on the 9th.

The rainfall was only ·042 inch, distributed over 2 days. The average rainfall for February in the twenty-five years, 1865–89, inclusive, was 2·150 inches, and the average number of rainy days was 17·2. The rainfall and the rainy days, therefore, were both considerably below the average. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879, also, 3·706 inches fell on 23 days. On the other hand, in 1873, only ·925 of an inch was measured on but 8 days; in 1890, only ·302 of an inch fell on but 7 days; and in 1887, only ·541 of an inch fell on 11 days. The rainfall in 1887 was much the smallest recorded in February for very many years. But the present record is probably unparalleled—·042 inch on 2 days. The nearest approach to this drought was in September, 1865, when only ·056 of an inch of rain was measured on but 3 days. There was no snow, sleet, or hail in Dublin.

The atmosphere was foggy on as many as 16 days, namely—the 4th, 5th, 8th, 9th, 13th, 14th, 15th, 16th, 18th, 20th, 23rd, 24th, 25th, 26th, 27th, and 28th. Notwithstanding the prevalence of fog, the amount of cloud—55·2 per cent.—fell far short of the average—66 per cent. High winds were noted on 8 days, reaching the force of a gale on only one day—the 11th.

The temperature exceeded 50° in the screen on as many as 14 days, compared with only 5 days in January, and with only 2 days in February, 1890; while it fell to or below 32° in the screen on only 2 days, compared with 7 days in January, and with 5 in February, 1890. The minima on the grass were 32°, or less, on 17 nights, compared with 21 nights in January, and 18 nights in February, 1890. On no day did the thermometer fail to rise above 40° in the screen.

Very open, favourable weather prevailed throughout the first week (1st–7th) especially in the east of Ireland. After Sunday, the 1st, an anticyclone, with barometrical readings as high as 30·70 inches or upwards, was found lying over France, St. George's and the English Channels. As the sky was densely clouded within the central area of this high pressure system, radiation was checked, and hence little or no frost was felt at the majority of British and Irish stations—the exceptions were in the extreme S.E. of England on Monday morning and central Ireland on Thursday morning. On Monday and Tuesday the S.W. winds blew strongly at times, but later on there was a calm, accompanied by some fog, and finally light to moderate S.W. winds prevailed, with very cloudy skies and open, but dry weather. In Dublin the mean height of the barometer was 30·542 inches, or as much as ·802 inch above the mean pressure during the preceding week, and the pressure reached 30·725 inches at 9 a.m. of Thursday (wind, W. by N.). The mean temperature was 46·2°; the mean dry bulb temperature at 9 a.m. and 9 p.m. was 46·1°. There was practically no measureable rainfall only ·002 inch being caught in the gauge as the result of a slight shower early on the morning of the 8th. The prevailing direction of the wind was S.W.

An area of high pressure was found lying over Ireland, England, France, and Western Germany throughout the second week, while depressions of great depth travelled eastwards across the North of Europe, and more shallow depressions existed over Southern Europe and the Mediterranean. Consequently, the weather was favourable in Ireland, rough and unsettled in Scandinavia, changeable in the Mediterranean Basin. On Wednesday, the 11th, the wind freshened to gale force from W. even in the east of Ireland, but otherwise light winds and calms prevailed. At 8 a.m. of Thursday the barometer was as low as 28·76 inches at Stockholm, which station was then close to the centre of a very perfect cyclone. Ireland lay quite outside the influence of this disturbance, the N.W. gales of which brought intense cold to the Swedish stations, the temperature recorded at 8 a.m. of Friday being −12° at Haparanna, +8° at Stockholm, and +10° at Hernösand. In Dublin the mean height of the barometer during the week was 30·409 inches. The corrected mean temperature was 42·4° The mean dry bulb temperature at 9 a.m. and 9 p.m. was 41·2°. The screened thermometers fell to 30·1° on Monday, the 9th. The rainfall amounted to ·027 inch only, of which ·024 inch was measured on Friday, the 13th.

During the third week conditions remained anticyclonic in our neighbourhood until Saturday, when evidence of the approach of a low pressure system to the S.W. of Ireland manifested itself in a steady fall of the barometer, the overcasting of the sky with cirriform cloud, and a freshening S.S.E. wind. Throughout the week a large area of high pressure (anticyclone) spread across Central Europe from Ireland to Poland, Hungary, and the south of Russia. Within the sphere of its influence, quiet, cold, foggy weather prevailed, and it was almost rainless. Across northern Europe, however, some large depressions travelled eastwards and conditions were unsettled. Over the Mediterranean, also, areas of relatively low pressure existed, keeping the weather more or less disturbed. Very dense fogs prevailed on Wednesday and Thursday in England and Holland, and on the former day also, in the E. and N.E. of Ireland. So great was the influence of the fog on the temperature in London that the maximum on Thursday was only 37°, whereas the thermometer rose to 59° at Nairn in the north of Scotland. In Dublin the mean height of the barometer was 30·475 inches. The corrected mean temperature was 42·6°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 40·8°. The prevailing winds were light from southerly points—between S.W. and S.E. The sun had considerable power by day. Rain fell on the early morning of Sunday, the 22nd, to the amount of ·010 inch.

The weather of the fourth week was remarkable in many respects—in England for the prevalence of dense fogs, and an extraordinarily large diurnal range of temperature—at Loughborough the

Printed image digitised by the University of Southampton Library Digitisation Unit

thermometer ranged from 20° to 57° in the 24 hours ending at 8 a.m. of Thursday, and at Cambridge the thermometer fell from 67° on Friday to 25° during the ensuing night—a range of 42° F.; in Ireland for a wave of extreme warmth and dryness of the atmosphere on Monday, and for the passage of a barometrical depression across the country on Wednesday and Thursday without one drop of rain, except at Belmullet. An anticyclonic system hung over Germany throughout the week, and a warm southerly wind skirting the western edge of this system in tangent fashion produced an extraordinary rise of temperature in parts of Ireland on Monday and Tuesday. In Dublin on Monday evening, the 23rd, puffs of warm air were felt from time to time, which raised the temperature to 61·9° at 7.15 p.m. So desiccated was the air at the same time that the wet bulb thermometer read only 47·9°, and the relative humidity fell to 40 per cent. At Mullaghmore, Co. Sligo, the temperature reached 63° next day, while the maximum in London (where dense fog prevailed) was only 39°. At Nairo, in the N.E. of Scotland, the thermometer rose to 64° on this day (Tuesday). On Saturday a strong S.W. to W. wind sprang up, and light showers fell towards evening. In Dublin the mean pressure was 30·166 inches—the barometer falling to 29·824 inches at 3 p.m. of Thursday (wind S.E., light). The corrected mean temperature was 47·5°; the mean dry bulb temperature at 9 a.m. and 9 p.m. was 46·2°. The screened thermometers rose to 61·9° on Monday and fell to 33·9° on Saturday. Rain fell on this last-named day to the amount of only ·003 inch. The wind was either calm, or southerly (S.E. to S.W.).

In Dublin, the rainfall up to February 28, 1891, has amounted to ·714 inch on 16 days, compared with a twenty-five years' (1865–1889) average of 4·350 inches on 34·5 days.

At Knockdolian, Greystones, Co. Wicklow, 1·275 inches of rain fell in January, on 15 days; and only ·120 inch in February on *only one day*, the 21st. At Cloneevin, Killiney, Co. Dublin, only ·470 inch fell on 11 days in January and only ·030 inch on 2 days in February.

MARCH.—Opening with a long-continued westerly gale, March, 1891, proved very severe, cold and showery. The night temperatures were particularly low at most inland stations. The most remarkable features of the month were the destructive "blizzard" of the 9th and 10th in the English Channel, and the fact that the mean temperature in Dublin was no less than 3° below that of February.

In Dublin the arithmetical mean temperature (41·7°) was considerably below the average (43·1°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 40·6°. In the twenty-six years ending with 1890, March was coldest in 1867 and 1883 (M. T. = 39·0°), and warmest in 1868 (M. T. = 47·3°). In 1876 the M. T. was 41·1°, in 1879 (the cold year) it was 42·5°, in 1888 it was as low as 39·8°, and in 1889 it was 44·0°, and in 1890 it was as high as 45·1°. As a general rule, February in Dublin is only a shade colder than March. This is due to the fact that the Continental anticyclone usually embraces the British Isles and Scandinavia in March, causing easterly winds. In the present year, however, February was actually 3·0° warmer than March.

The mean height of the barometer was 29·858 inches, or 0·058 inch below the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·470 inches at 7 p.m. of the 3rd, and fell to 29·052 inches at 3 p.m. of the 15th. The observed range of atmospherical pressure was, therefore, 1·418 inches—that is, nearly an inch and a half.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 40·6°, or 3·0° below the value for February, 1891. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·485), the M. T. becomes 41·5°. The arithmetical mean of the maximal and minimal readings was 41·7°, compared with a twenty-five years' average of 43·1°. On the 1st the thermometer in the screen rose to 57·9°—wind, W.S.W.; on the 12th the temperature fell to 27·1°—wind, W. The minimum on the grass was 21·6° also on the 12th.

The rainfall was only ·936 inch, distributed, however, over 16 days. The average rainfall for March in the twenty-five years, 1865–89, inclusive, was 2·061 inches, and the average number of rainy days was 16·5. The rainfall, therefore, was much below the average, while the rainy days were slightly below it. In 1867 the rainfall in March was very large—4·972 inches on 22 days; in 1888, 3·753 inches fell on 18 days; in 1866 also 3·629 inches fell on 21 days. On the other hand, in 1871, only ·815 inch was measured on 12 days; and in 1874 only ·953 inch fell, also on 12 days. In 1887 (the "dry year"), 1·485 inches of rain fell on 15 days; in 1889 1·076 inches fell on, however, as many as 17 days; and in 1890 the fall was as much as 3·693 inches on 17 days.

The atmosphere was foggy on the 12th, 13th, 14th, and 31st. High winds were noted on 14 days, reaching the force of a gale on 5 days, the 3rd, 4th, 5th, 6th, and 25th. Snow or sleet occurred on the 7th, 8th, 10th, 12th, 25th, 26th, and 27th; and hail fell on the 2nd, 7th, 8th, 10th, 11th, 13th, 16th, 26th, and 30th. The temperature exceeded 50° in the screen on only 9 days, compared with as many as 14 days in February, and 19 days in March, 1890; while it fell to or below 32° in the screen on as many as 10 days, compared with only 2 days in February and only 4 days in March, 1890. The minima on the grass were 32°, or less, on 20 nights, compared with 17 nights in February and 16 nights in March, 1890. On 3 days the thermometer did not rise to 40° in the screen.

The chief feature of the period ending on Saturday, the 7th, was a singularly persistent westerly gale, which depended upon the passage eastwards across Northern Europe of a series of very deep atmospherical depressions, while an anticyclone held over the Bay of Biscay and France. In Dublin the wind blew freshly from points between W.S.W. and W.N.W. almost continuously until the afternoon of Friday, the 6th, when it moderated, and a copious rainfall occurred, yielding ·130 inch. A great "chill" passed south-eastwards over Western Europe on Friday and Saturday. On Monday evening there was a sharp squall of rain and hail, and on the following day also passing showers fell at intervals. During the week barometrical gradients were often very decided and steep over Western Europe—for example, at 8 a.m. of Monday, the 2nd, the barometer varied from 28·31 inches

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

at Bodö (in the N.W. of Norway) to 30·33 inches in Brittany and 30·38 inches at Biarritz (in the S.W. of France). The mean pressure at 8 a.m. for the week was—at Bodö, 28·861 inches, but at Valentia Island, in Kerry, 30·286 inches. This fact will convey a good idea of the steepness of the baric gradients and the resulting force of the westerly wind. In Dublin the mean height of the barometer was 30·087 inches, pressure ranging from 30·470 inches at 7 p.m. of Tuesday (wind W.N.W.) to 29·658 at 9 p.m. of Saturday (wind W.). The corrected mean temperature was 46·5°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 45·5°. The shade thermometer rose to 57·9° on Sunday, the 1st. The rainfall amounted to ·160 inch on three days. The prevailing wind was westerly. Snow fell on the Dublin mountains on Saturday afternoon.

The second was a very severe week—in Dublin as cold as the coldest of the whole winter, but otherwise fine; in southern England notable for one of the greatest snow storms and tempests on record, caused by the passage up the English Channel of a complex depression, with two minima, in the interval between Sunday, the 8th, and Wednesday, the 11th. This system produced violent E. to N.E. gales and heavy falls of snow all over the S.W., S., and S.E. of England—the bad weather culminating in a disastrous and fatal "blizzard" on the night of Monday, the 9th. At this time the sky became overcast in Ireland with a canopy of cirriform cloud moving rapidly in an upper current from S.W., while the wind freshened somewhat from E., but the disturbance passed by harmlessly, and only a few snow and hail showers fell from time to time. Very severe frosts were, however, felt at night—the minima at Parsonstown being 21°, 22°, 25°, 18°, 19°, 19°, and 21°. In France warmer weather was experienced, the wind blowing freshly from S. and S.W., and heavy rains falling generally. In Dublin the mean height of the barometer was 29·757 inches. The corrected mean temperature was 35·4°, or exactly the same as that of the week ending January 10th 1891. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 34·3°, or 11·2° below the corresponding value in the previous week. The screened thermometers rose to 46·0° on Saturday having fallen to 27·1° on Thursday; until Wednesday the temperature in the shade did not reach 40°. The prevailing wind was north-easterly. Rainfall was measured on three days, the total amount being ·266 inch, of which ·036 inch fell as snow and hail on Sunday, the 8th, and ·220 inch as rain in the early morning hours of Sunday, the 15th.

Although still cold and changeable, the weather of the week ended Saturday, the 21st, showed a distinct improvement upon that of the previous week. During the first three days conditions were specially unsettled owing to the passage of a deep atmospherical depression south-wards across Ireland to the Bay of Biscay and the Peninsula. At 8 a.m. of Sunday, the 15th, the barometer read only 29·01 inches at Malin Head, and 12 hours later it sank to 28·88 inches at Mullaghmore, Co. Sligo. Rain fell heavily at this time in many parts of the British Islands, and the wind shifted from S.W. to N.E. and E. as the centre of the depression travelled southward. After Sunday winds from polar quarters (E., N.E., and N. to N.W.), held throughout the week. The nights were often clear and frosty: the days were chiefly dry and cool, with clouds at times and cold showers in places. This was particularly so on Friday, when a V-shaped depression, subsidiary to a large system of low pressure over Northern Europe, passed southwards over Great Britain. In Dublin the mean height of the barometer was 29·750 inches, pressure ranging between 29·052 inches at 3 p.m. of Sunday (wind, S.) and 30·061 inches at 9 a.m. of Saturday (wind N.). The corrected mean temperature was 41·6°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 41·8°. The rainfall equalled ·188 inch, on four days. The prevailing winds were N.E. and N.

The record of the fourth week, ending Saturday, the 28th, is again one of unsettled, generally cold, weather—the prevailing "set" of wind and cloud over North-western Europe being from points between W. and N. Only on Tuesday, the 24th, and in the earlier part of Wednesday, the 25th, was the weather at all mild, and even then the wind blew strongly from S.W. and W. Indeed, on the latter day a fresh or strong westerly gale was felt over the greater part of Ireland. Towards night temperature fell fast, and falls of sleet and snow occurred, accompanied in places by thunder and lightning. Conditions remained very rough and inclement until the afternoon of Good Friday, when the weather moderated and became finer and drier. Saturday, although still harsh, was fine and chiefly sunny. The depression, which caused Wednesday's gale, was of great size and considerable depth—the barometer falling below 28·9 inches near the centre of the system. In Dublin the mean height of the barometer during the week was 29·789 inches. The corrected mean temperature was 42·4°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 41·3°. The rainfall, which was chiefly in the form of snow or sleet, amounted to ·303 inch, on four days.

Fresh N.W. winds blew on Easter Day, the 29th, and also on Easter Monday. These were followed by a very sharp frost on the morning of the 31st, the thermometer falling to 27·9° in the screen and to 22·7° on the grass.

The rainfall in Dublin during the three months ending March 31st has amounted to only 1·650 inches on only 32 days, compared with 7·470 inches on 45 days during the same period in 1890, 5·738 inches, on 53 days in 1889, 6·097 inches on 41 days in 1888, and a twenty-five years' average of 6·411 inches on 51·0 days (1865–1889, inclusive).

At Knockdolian, Greystones, Co. Wicklow, 1·410 inches of rain fell on 14 days during March; and the total rainfall since January 1, 1891, equals 2·805 inches, on 30 days. At Cloncevin, Killiney, Co. Dublin, the rainfall in March was ·740 inch, on 13 days; while the total fall since January 1 has been 1·240 inches, on 26 days, compared with a six years' average (1885–1890, inclusive) of 6·060 inches, on 44 days, for the first quarter of the year.

April.—April, 1891, was a cold, rather dry and March-like month. The mean temperature, rainfall, and rainy days were all below the average. On only one day, the 30th, did the thermometer rise above 60° in the shade.

In Dublin the arithmetical mean temperature (45·7°) was 2·0° below the average (47·7°); the

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

mean dry bulb readings at 9 a.m. and 9 p.m. were 45·4°. In the twenty-five years ending with 1889, April was coldest in 1879 (the cold year), (M. T.=44·5°), and warmest in 1865 and 1874 (M. T.=50·4°). In 1886, the M. T. was 46·3°, in 1887 it was as low as 45·1°, in 1888 it was (as in 1891) only 45·7°, in 1889 it was 46·1°, and in 1890 it was 47·3°.

The mean height of the barometer was 29·964 inches, or 0·114 inch above the average value for April—namely, 29·850 inches. The mercury rose to 30·342 inches at 9 p.m. of the 20th, and fell to 29·383 inches at 9 a.m. of the 5th, and 9 p.m. of the 29th. The observed range of atmospherical pressure was, therefore, 0·959 inch—that is, a little less than an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 45·4°, or 4·8° above the value for March, 1891. Using the formula, *Mean Temp.* $=min.+(max.-min. \times \cdot 476)$, the value also becomes 45·4°, or 2·0° below the average mean temperature for April, calculated in the same way, in the twenty-five years, 1865–89, inclusive (47·4°). The arithmetical mean of the maximal and minimal readings was 45·7°, compared with a twenty-five years' (1865–1889 inclusive) average of 47·7°. On the 30th, the thermometer in the screen rose to 65·7°—wind, S.S.W.; on the 10th the temperature fell to 33·1°—wind, calm. The minimum on the grass was 26·1°, on the 1st.

The rainfall was 1·553 inches, distributed over 14 days. The average rainfall for April in the twenty-five years, 1865–89, inclusive, was 2·055 inches, and the average number of rainy days was 15·2. The rainfall, therefore, was considerably below the average, while the rainy days were also deficient. In 1877 the rainfall in April was very large—4·707 inches on 21 days; in 1882 also 3·526 inches fell on 20 days. On the other hand, in 1873, only ·498 of an inch was measured on 8 days; and in 1870 only ·838 of an inch fell, also on 8 days. The fall in 1890 was 1·575 inches on 14 days.

No solar halos were seen. There were lunar halos on the 14th and 15th. The atmosphere was more or less foggy on the 4th, 5th, 9th, 10th, 11th, 26th, and 27th. High winds were noted on 9 days, but did not reach the force of a gale on any occasion. There was no snow or sleet, but hail fell on the 1st and 7th. The temperature exceeded 50° in the screen on 18 days, compared with 9 days in March, 14 days in February, and 5 days in January. It did not fall below 32° in the screen on any night. The minima on the grass were 32°, or less, on 12 nights, compared with 20 nights in March, 17 in February, and 21 nights in January. The mean lowest temperature on the grass was 34·1° (as in 1890 also), compared with 34·4° in 1889, 34·6° in 1888, and 31·6° in 1887.

During the period ending Saturday the 4th a large area of low barometer came in over Ireland from the Atlantic, causing strong south-easterly winds and heavy falls of cold rain and sleet almost until the end. The maximal rainfall was ·482 inch on Friday the 3rd. Hail was observed on Wednesday the 1st.

Still continuing cold throughout, the weather of the week ended Saturday the 11th was at first dull and rainy, afterwards dry and hazy but at times bright. During the first two days an elongated V-shaped depression stretched across Central Europe from Ireland to North Germany. To the N. of this "furrow" of low pressure, strong, cold S.E. winds prevailed, and heavy rains fell at many English and German stations, thunder occurring on Sunday at Loughborough, Cambridge, and Paris. To the S. of the "hollow," variable S.W. winds of but moderate strength, warmer but rainy weather prevailed. During the period from Tuesday to Thursday, inclusive, a clearly-defined cyclonic system travelled in a curve from S.W. of Ireland to Brittany, across Northern France and Belgium to the neighbourhood of Berlin, where the system disappeared. It caused cold, dry, and fine weather in Scotland and Ireland, in which countries its N.E. winds prevailed; but in England the weather was dull, cold, and rainy. On Friday the 10th a fall of the barometer in the W. caused southerly winds and a rise of temperature in Ireland, but on Saturday the barometer rose again and the wind backed to E., becoming as dry and searching as ever. In Dublin the mean height of the barometer was 29·973 inches, pressure ranging from 29·383 inches at 9 a.m. of Sunday (wind, S.E.) to 30·195 inches at 9 p.m. of Thursday (wind, N.N.W.). The corrected mean temperature was 43·1°, the mean dry bulb temperature at 9 a.m. and 9 p.m. being 43·0°. The thermometers in the screen rose to 51·8° on Friday, having been down to 33·1° during the previous night. Rain fell in measurable quantity on three days, the total amount being ·289 inch, of which ·185 inch was referred to Sunday. The prevailing wind was N.N.E. Hail fell on Tuesday the 7th.

The "Dawn of Spring" would be an appropriate description of the weather of the week ended Saturday the 18th, for—although temperature was still low by night and the wind was often from a cold point and searching—the days were more genial than of late, and the showers were of soft rain and gave an unwonted impetus to vegetation. In the period from Sunday to Tuesday an anticyclone was found over Scandinavia, while a depression passed south-eastwards from the S.W. of Ireland across France to Gulf of Genoa. The latter system caused heavy rains in southern Ireland and many parts of France, and snow fell on the Dublin Mountains early on Monday morning. In the wake of this depression a new area of high pressure appeared on Tuesday off the S.W. of Ireland, and fine weather set in, with N.W. winds, interrupted by easterly sea breezes on the east coast during the daytime. Lunar halos were seen at many British and Irish stations on the evenings of Tuesday and Wednesday the 14th and 15th. Between this latter day and the close of the week a cyclonic system of no great intensity travelled south-eastwards down the North Sea, causing fresh N.W. to N. winds and cold showers of rain, sleet, and hail at many stations, especially on the east coast of Great Britain. In Ireland the weather was finer and milder. In Dublin the mean atmospherical pressure was 30·172 inches. The corrected mean temperature was 46·6°, the mean dry bulb temperature at 9 a.m. and 9 p.m. was 46·4°. The rainfall was ·238 inch on three days. The prevailing wind was N.N.W.

Cold, dry weather and parching easterly and north-easterly winds held all through the week ended

Printed image digitised by the University of Southampton Library Digitisation Unit

Saturday, the 25th. Throughout the period an anticyclone, or area of high barometrical pressure, was found over Scotland; whereas pressure was relatively low over Spain, France, and the Bay of Biscay. Hence, fresh to strong easterly or north-easterly winds were prevalent in the British Islands, and on Wednesday and Thursday they reached the force of a moderate gale at many exposed seaboard stations. The rainfall during the week was on the whole trifling, but a considerable fall of cold rain spread westwards from the N.E. of England to the E. and S.E. of Ireland in the interval between Tuesday morning and Thursday morning. On this latter day, also, considerable downpours of rain occurred over the greater part of France. On Friday the northern anticyclone moved southwards, and decreased in intensity. In Dublin the mean height of the barometer was 30·224 inches. The corrected mean temperature was 45·6°, or 1° below that of the previous week. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 45·7°. Rain fell in measurable quantity on only one day—Tuesday—to the amount of ·060 inch. The wind was constantly E. to N.E. The mean temperature was 0·4° below that of the last week of January, 1·9° below that of the last week of February, and 0·9° below that of the first week of March.

In the closing period of the month—26th to the 30th, inclusive—at first of an easterly type, cold and hazy, the weather afterwards became warmer and softer, with fresh S.W. winds and frequent showers. In general, therefore, conditions were favourable and much more genial than for many weeks back. At the beginning of the period an anticyclone stretched from the east of Ireland across England and the North Sea to Holland and Belgium; it was accompanied by fine, cold, hazy weather. On Monday depressions arrived off the N.W. of Scotland and also the W. of France, and by Wednesday gradients for S.W. winds were fully established over Western Europe. A considerable, but short-lived, rise of temperature followed, the thermometer in the shade rising on Thursday, the 30th, to 67° at Cambridge, 66° in Dublin, 65° at Loughborough, 64° in London, and 63° at Parsonstown and Yarmouth. The thermometer in the screen fell to 36·1° on Sunday, and rose to 65·7° on Thursday. The rainfall was ·071 inch on three days. The prevailing winds were S.W. and N.W.

The rainfall in Dublin during the four months ending April 30th has amounted to only 3·203 inches on 46 days, compared with 9·045 inches on 59 days during the same period in 1890, 8·345 inches on 74 days in 1889, 8·090 inches on 58 days in 1888, and a 25 years' average of 8·466 inches on 66·2 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall during April, 1891, amounted to 2·920 inches, distributed over 13 days; ·950 inch falling on the 1st, and ·720 inch on the 3rd. The total fall since January 1st, 1891, equals 5·725 inches on 43 days.

At Cloneeviu, Killiney, Co. Dublin, the rainfall in April was 1·190 inches on 12 days. The total fall since January 1st has been only 2·430 inches on 38 days—the averages of the six previous years for the same four months being 7·746 inches, on 58 days.

MAY.—May, 1891, was cold for the most part, showery, and unsettled, with an overwhelming prevalence of "polar" winds and frequent falls of hail. On the 16th and 17th, snow, sleet, and hail fell in most parts of the British Islands. Only in the period from the 10th to the 13th inclusive was there anything like summer heat.

In Dublin the arithmetical mean temperature (49·6°) was decidedly below the average (52·0°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 49·5°. In the twenty-six years ending with 1890, May was coldest in 1869 (M. T. = 48·2°), in 1885 (M. T. = 48·7°), and in 1879 (the "cold year") (M. T. = 48·8°). It was warmest in 1868 (the "warm year") (M. T. = 55·8°) and 1875 (M. T. = 54·9°). In 1886, the M. T. was 50·5°, in 1887 it was 51·8°, in 1888 it was 52·5°, in 1889 it was 54·6°, and in 1890 it was 53·2°.

The mean height of the barometer was 29·799 inches, or 0·190 inch below the corrected average value for May—namely, 29·989 inches. The mercury rose to 30·293 inches at 9 a.m. of the 12th, and fell to 29·237 inches at 9 a.m. of the 1st. The observed range of atmospherical pressure was, therefore, 1·056 inches—that is, a little less than an inch and one-tenth.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 49·5°, or 4·1° above the value for April, 1891. Using the formula, *Mean Temp.* = *min.* + (*max.*—*min.* × ·47), the value was 49·2°, or 2·4° above the average mean temperature for May, calculated in the same way, in the twenty-five years, 1865–89, inclusive (51·6°). The arithmetical mean of the maximal and minimal readings was 49·6°, compared with a twenty-five years' average of 52·0°. On the 12th, the thermometer in the screen rose to 67·8°—wind E.N.E.; on the 18th the temperature fell to 32·8°—wind, N.E. The minimum on the grass was 27·3°, on the 18th.

The rainfall amounted to 2·792 inches, distributed over 17 days. The average rainfall for May in the twenty-five years, 1865–89, inclusive, was 2·030 inches, and the average number of rainy days was 15·4. The rainfall and the rainy days, therefore, were above the average. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869 also 5·414 inches fell on 19 days. On the other hand, in 1871, only ·378 of an inch was measured on 9 days; in 1876 only ·798 of an inch fell on 6 days; in 1887 only ·882 of an inch fell on 10 days; and in 1888 only ·978 of an inch on 11 days. In 1890, 2·438 inches fell on 17 days. May was the first month in 1891 in which the rainfall exceeded the average.

A solar halo was seen on the 8th, and a lunar halo on the 17th. High winds were noted on as many as 8 days, attaining the force of a gale, however, on not one occasion. Snow or sleet fell on the 16th and 17th. Hail occurred on the 1st, 2nd, 3rd, 15th, 16th, 17th, 19th, and 26th. Thunder was heard on the 28th.

During the month the thermometer in the screen did not fall below 32°, but on six nights a temperature of 32° or less recorded on the grass. The mean minimal temperature on the grass was 37·7°, compared with 42·2° in May, 1890, 42·4° in May, 1889, 37·5° in 1888, and 37·9° in 1887.

On Friday, the 1st, heavy showers of rain and hail fell at many stations, and the wind veered from S.W. to N.W. at night, with a rapid fall of temperature. The resulting rainfall in Dublin was ·338 inch. On Saturday, the 2nd, hail also fell.

Changeable, but generally favourable weather prevailed during the week ended Saturday, the 9th. In Ireland the rainfall was heavy, and the amount of sunshine was small; yet the moisture was needed and proved beneficial; and the clouds, which shut out the sunshine by day, checked radiation at night and so prevented the occurrence of those spring-frosts, which are so harmful to vegetation. At first, westerly winds prevailed, with showers of rain and hail. On Monday, the 4th, a southerly current set in over Ireland, lasting until Thursday and bringing clouds and genial rain. On Friday a complex series of low pressure systems was found over the British Islands, the wind shifted to N.E. in Ireland and the weather became bright and bracing as the disturbances travelled away southeastwards. Saturday was again fine—cloudy and dull in the forenoon, fair in the afternoon. In Dublin the mean height of the barometer was 29·890 inches. The corrected mean temperature was 50·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 50·7°. The rainfall amounted to ·471 inch on four days, the maximal record in 24 hours being ·310 inch on Thursday. Hail fell on Sunday, the 3rd.

Summer and winter met in the week ended Saturday, the 16th. The first four days were beautiful—bright, sunny, warm days being followed by cool, refreshing nights. Atmospherical pressure was uniformly high, and the type of its distribution was anticyclonic, except in the S.E. of England, where shallow depressions were found on Sunday and Monday, causing dull, cold, and rather rainy weather in that district. In Dublin the prevailing wind was N.E. until Wednesday, and then N.W. to the end of the week. This latter wind was part of the circulation round a succession of depressions, which travelled southeastwards across Scandinavia and the North Sea on and after Wednesday, the 13th. It brought back winter to the British Islands—squalls, hail-storms (accompanied in many places by thunder on Friday), and showers of sleet and snow prevailing on Friday and Saturday. In contrast to this, on Tuesday the thermometer had risen to 81° in the shade at Loughborough, and to 78° in London, while even on Wednesday the maxima were as high as 76° at Oxford and York, 77° at Hurst Castle, 78° in London, and 80° at Cambridge. In Ireland the highest reading was 75° at Parsonstown on Tuesday on which day the maximum in Dublin was 67·8°. In this city the mean pressure was 30·107 inches—highest, 30·293 inches at 9 a.m. of Tuesday (wind, E.N.E.) The corrected mean temperature was 52·1°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 51·4°. On Tuesday the screened thermometers rose to 67·8°, and on Saturday they fell to 37·7°. The rainfall was ·118 inch, on three days, the maximal fall in 24 hours being ·088 inch on Friday. On Saturday the maximal shade temperature was only 47·6°.

Many years have passed since the third week in May has proved as inclement as that of 1891. Sunday, the 17th, was like a day in midwinter—frequent heavy showers of hail, sleet, and cold rain keeping the temperature so low that the maximum in the screen was only 45·7°. At night a sharp frost occurred on the grass, and the sheltered thermometer fell to 32·8° in the city. The minimum at York during this night was 24°, and snow fell heavily in some of the English midlands. Whitsun Monday proved fair and bright on the east coast of Ireland; but very cold, wet weather prevailed over the South of England, to which district a complex system of low pressure had advanced from the westward. Indeed, all through the week, conditions were cyclonic over Western Europe, and a succession of areas of low pressure passed up the English Channel; then turning northwards, they disappeared off the west coast of Norway. On Saturday a depression advanced more directly over Ireland, where the weather once more became cold and raw, squally and wet. On this day as many as four separate depressions were shown on the weather chart. Thunder and hail showers were a common occurrence during this cold period, which might aptly be called a "relapse into winter." In Dublin the mean height of the barometer was 29·601 inches. The corrected mean temperature was only 45·0°, or 7·1° below that of the previous week (52·1°). The mean dry bulb temperature at 9 a.m. and 9 p.m. was 46·1°. The screened thermometers fell to 32·8° on Monday morning and rose to 56·7° on Friday. The rainfall was ·668 inch, on four days, ·272 inch being measured on Saturday. The prevailing winds were N.W. and N.E.

Very broken, showery weather held throughout the week ended Saturday, the 30th. There was, however, a decided advance in temperature, which became more accentuated towards the close, with the setting in of a southerly air-current. During the greater part of the period the weather in the British Islands was determined by an atmospherical depression, which followed a very erratic course. On Sunday morning the centre of this system lay over St. George's Channel, whence it travelled eastwards across England, causing a prolonged thunderstorm and heavy rainfall in London during the afternoon. On Monday the centre was found off the Wash, where it remained nearly motionless for 24 hours. The system then began to travel slowly westwards, accompanied by thunder and hail showers, reaching Ireland on Thursday morning. On this day six-tenths of an inch of rain fell in Dublin, and thunder was heard at 9 and 11 a.m. With the coming of the S.W. winds of the depression the weather improved on Friday, when the disturbance passed off from the coast of Donegal in a northwesterly direction. In Dublin the mean height of the barometer was 29·677 inches, pressure ranging between 29·924 inches at 9 a.m. of Monday (wind, N.N.E.), and 29·436 inches at 9 p.m. of Thursday (wind, S.E.). The screened mean temperature was 49·0°, or 4·0° above that of the previous week. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 49·5°. The thermometers in the screen rose to 62·6° on Saturday, having fallen to 41·2° on both Monday and Tuesday. The rainfall was ·922 inch on four days—·600 inch being measured on Thursday. Hail fell on Tuesday and thunder was heard on Thursday.

Sunday, the 31st, was squally and for the most part, wet.

The rainfall in Dublin during the five months ended May 31st has amounted to 5·995 inches on 63 days, compared with 11·483 inches on 76 days during the same period in 1890, 10·476 inches

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

on 91 days in 1889, 9·068 inches on 69 days in 1888, 6·489 inches on 62 days in 1887, and a 25 years' average of 10·496 inches on 81·6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in May, 1891, was 3·615 inches, distributed over 16 days. Of this quantity ·840 inch fell on the 7th, ·790 inch on the 23rd, and ·620 inch on the 31st. The total fall since January 1st, 1891, equals 9·340 inches on 59 days.

At Cloneevin, Killiney, Co. Dublin, the rainfall in May was 2·19 inches on 15 days. The total fall since January 1 has been only 4·62 inches on 58 days—the averages of the six previous years for the same five months being 9·38 inches, on 93 days.

JUNE.—A generally favourable month, of high mean temperature and atmospherical pressure, showing a marked preponderance of north-easterly and easterly winds, in marked contrast to June, 1890, when the prevalent winds were S.W. and W. The rainfall was above the average, while the rainy days were just equal to it.

In Dublin the arithmetical mean temperature (59·0°) was slightly above the average (57·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 58·0°. In the twenty-six years ending with 1890, June was coldest in 1882 (M. T.=55·8°), and in 1879 (the "cold year") (M. T.=55·9°). It was warmest in 1887 (M. T.=62·3°), in 1865 (M. T.=61·0°), and in 1868 (the "warm year") (M. T.=60·5°). In 1886 the M. T. was 57·5°, in 1888 it was 56·2°, in 1889 it was 59·5°, and in 1890 it was 58·1°.

The mean height of the barometer was 30·014 inches, or 0·097 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·407 inches at 9 a.m. of the 12th, and fell to 29·457 inches at 9 p.m. of the 29th. The observed range of atmospherical pressure was, therefore, 0·950 inches—that is, almost an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 58·0°, or 8·5° above the value for May, 1891. Using the formula, *Mean Temp.*=*Min.*+(*max.*−*Min.*×·465), the value was 58·6°, or 1·4° above the average mean temperature for June, calculated in the same way, in the twenty-five years, 1865–89, inclusive (57·2°). The arithmetical mean of the maximal and minimal readings was 59·0°, compared with a twenty-five years' average of 57·8°. On the 23rd, the thermometer in the screen rose to 73·8°—wind, N.E.; on the 10th the temperature fell to 43·9°—wind, N.N.E. The minimum on the grass was 38·6°, also on the 10th.

The rainfall amounted to 2·753 inches, distributed over 14 days. The average rainfall for June in the twenty-five years, 1865–89, inclusive, was 1·817 inches, and the average number of rainy days was 18·8. The rainfall was, therefore, much above the average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879 also 4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 of an inch was measured on 6 days; in 1887, the rainfall was only ·252 of an inch, distributed over only 5 days; in 1874 only ·405 of an inch was measured on 9 days; and in 1868 only ·677 of an inch fell on but 6 days. In 1888 the rainfall was as much as 3·045 inches distributed over as many as 18 days. In 1890 it was 1·930 inches on 18 days.

High winds were noted on only 7 days, and attaining the force of a gale on but one occasion—the 30th. Temperature reached or exceeded 70° in the screen on 6 days, as compared with 17 days in 1887, only 1 day in 1888, 10 days in 1889, and only 2 days in 1890. Thunder was heard on the 15th and 24th, and hail fell on the 15th.

In the first week, ending Saturday, the 6th, the weather remained in a very unsettled, dull, and rainy condition. An anticyclone was found throughout over Scandinavia and the Norwegian Sea, while areas of low pressure advanced towards the British Islands from the southward, throwing off troughs of low pressure which from time to time spread eastwards across Germany. Under these circumstances, dry, fine weather and low temperatures ruled over Northern Europe, but heavy rains and thunderstorms were prevalent over the British Islands, France, and Germany. On Monday morning, the 1st, an easterly breeze and sea-fog caused a remarkable chill in the east of Scotland and north-east of England—at 8 a.m. the thermometer read 46° at Wick and Aberdeen, and only 44° at Shields; at the same hour it read 64° at Holyhead and 67° at Fanö in Denmark—both insular stations. Dublin escaped any electrical disturbances, but the rains were heavy and persistent, and temperature was very low for the time of year. The screened thermometers rose to 62·7° on Wednesday, the 3rd, and fell to 48·2° on Saturday, the 6th—the range of temperature, therefore, was not large. The rainfall was 1·228 inches on five days, ·574 inch falling on Wednesday, and ·391 inch on Thursday. The prevailing winds were S.E. and E.

Very favourable weather, from both a sanitary and an agricultural point of view, held during the week ended Saturday, the 13th. Between Sunday and Wednesday a depression was travelling slowly in an irregular path north-eastwards across France, Belgium, Holland, and Schleswig-Holstein to the Baltic. Heavy rains fell over the Continent in connection with this system of disturbance, but in England it merely caused strong N.E. winds, clouds, and low temperature. Ireland and Scotland were at this time under the influence of an anticyclone, and the weather was chiefly fine and quiet. In Dublin the first two days were rather cloudy and cold, but then came a very fine period, lasting until Friday inclusive, with westerly land breezes or calms and low temperature by night, easterly sea breezes and hot sunshine by day. After Wednesday, England also came under the influence of the high pressure area, which drifted slowly south-eastwards. A slight depression on Saturday morning caused a grateful rainfall in parts of Ireland. The week closed with fair promise of summerlike weather. In Dublin the mean height of the barometer was 30·180 inches, pressure rising to 30·407 inches at 9 a.m. of Friday (wind, E.). The corrected mean temperature was 54·3°, or 2·9° below the average. The mean dry bulb reading at 9 a.m. and 9 p.m. was also 54·3°. The screened thermometers rose to 66·0° on Saturday, having fallen to 43·9° on Wednesday. Rain fell in appreciable amount on only one day—Friday (or rather Saturday morning). The total fall was ·044 inch.

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

On the week ended Saturday, the 20th, changeable, cool, and showery at first, the weather became settled and in all respects summerlike after Monday, except in the far North of Scotland, where rain continued to fall daily, though not in large quantities. There were some atmospherical depressions in the North at the beginning of the week, and, in connection with these, sharp thunder and hail showers occurred on Monday in both England and Ireland. An anticyclone then spread northwards from France, finally covering the British Islands. At first the wind was S.W. and temperature rose fast; afterwards calms and easterly winds were experienced, the weather remaining fair and warm owing to the powerful sunshine by day. In Dublin the mean height of the barometer was 30·213 inches. The mean temperature (corrected) was 61·6°, or no less than 7·3° higher than that of the previous week. The mean dry bulb temperature at 9 a.m and 9 p.m. was 61·5°. The screened thermometers rose to 72·5° on Thursday, having fallen to 48·4 on Sunday. Rain fell on two days to the amount of ·269 inch. Of this quantity ·171 inch was the result of the thunder and hail showers of Monday. On Tuesday night the minimal temperature was 60·9°. On Friday the thermometer rose to 78° in the shade at Parsonstown.

Two very different types of weather were witnessed during the week ended Saturday, the 27th. Up to and including Tuesday conditions were anticyclonic and the weather was bright and warm. The centre of high pressure was found over Scandinavia, whence a ridge stretched south-westwards to Scotland and Ireland. Meanwhile, a shallow "thunderstorm" depression travelled slowly northwards across France and finally north-westwards to the south of Ireland, bringing with it violent thunderstorms and downpours of rain. In Dublin a heavy thundershower occurred at 5.15 p.m. of Wednesday, followed by a severe thunderstorm half-an-hour later. Next day there were storms of great intensity over the greater part of England, the accompanying rainfall amounting to 2·04 inches at Liverpool and 2·26 inches at Loughborough. On Friday gradients for southerly winds became steep over Ireland, squally and heavy showers being the result. Saturday was also showery, but the wind drew into S.W. and the barometer rose. Intense heat was felt in Sweden and Norway on and after Monday, the 22nd—readings above 80° being recorded at several stations, the highest of all being 88° at Hernösand (Lat. 62½° N.) on Wednesday. In Scotland also the weather remained quite fine until Friday. Some dense fogs occurred on the North Sea, the Irish Sea, and the English Channel Coasts during the week. In Dublin, the mean height of the barometer was 29·963. The corrected mean temperature was 61·6°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 61·1°. The screened thermometers rose to 73·8° on Tuesday and fell to 53·1° on Monday. The rainfall was 1·089 inches on four days. Of this quantity ·604 inch fell on Wednesday.

Sunday, the 28th, proved for the most part fine, but a brisk fall of the barometer took place as a depression, which was deep for the time of year, advanced over the kingdom from S.W. On the 29th, heavy showers of rain occurred, and on the 30th the wind blew a moderate gale at times from S.W.

The rainfall in Dublin during the six months ending June 30th has amounted to 8·748 inches on 77 days, compared with 13·413 inches on 94 days during the same period in 1890, 10·576 inches on 97 days in 1889, 12·113 inches on 87 days in 1888, 6·741 inches on 67 days in 1887, and a 25 years' average of 12·313 inches on 95·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in June, 1891, was 2·615 inches, distributed over 11 days. Of this quantity ·880 inch fell on the 15th, ·370 inch on the 24th, and ·350 inch on the 26th. The total fall since January 1 has been 11·955 inches, on 70 days.

At Cloneevin, Killiney, Co. Dublin, the rainfall in June was 2·07 inches on 14 days. The total fall since January 1 has been only 6·69 inches on 67 days—the averages of the six previous years for the same six months being 11·13 inches, on 84 days.

JULY.—A changeable, squally, showery month, of average temperature and rainfall, with a great preponderance of north-westerly winds—a very common state of things in an Irish July.

In Dublin the arithmetical mean temperature (59·0°) was decidedly below the average (60·6°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 58·3°. In the twenty-six years ending with 1890, July was coldest in 1879 (the "cold year") (M. T = 57·2°) It was warmest in 1887 (M. T. = 63·7°), and in 1868 (the "warm year") (M. T. 63·5°). In 1886 the M. T. was 61·0°; in 1888 it was as low as 57·3°; in 1889 it was 58·7, and in 1890 it was 58·1°. From this, 1887 proves to have been the warmest since the present records commenced, whilst July, 1888, was almost the coldest.

The mean height of the barometer was 29·936 inches, or 0·021 inch above the corrected average value for July—namely, 29·915 inches. The mercury marked 30·365 inches at 9 a.m. of the 14th, and fell to 29·434 inches at 4.20 p.m. of the 6th. The observed range of atmospherical pressure was, therefore, 0·931 inches—that is, a little less than an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 58·3°, or 0·3° above the value for June, 1891. Using the formula, *Mean Temp.* = *min.* + (*max.*—*min.* × ·465), the value was 58·6°, or 1·6° below the average mean temperature for July, calculated in the same way, in the twenty-five years, 1865–89, inclusive (60·2°). The arithmetical mean of the maximal and minimal readings was 59·0°, compared with a twenty-five years' average of 60·6°. On the 16th, the thermometer in the screen rose to 72·8°—wind, S.W.; on the 10th the temperature fell to 46·8°—wind, N.N.W. The minimum on the grass was 43·0° on this same date.

The rainfall was 2·187 inches, distributed over 15 days. The average rainfall for July in the twenty-five years, 1865–89, inclusive, was 2·420 inches, and the average number of rainy days was 17·2. The rainfall, therefore, was somewhat below the average, while the rainy days were also below it. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1871 also

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

4·391 inches fell on 28 days. On the other hand, in 1870, only ·539 of an inch was measured on 8 days; in 1869, the fall was only ·739 of an inch on 9 days, and in 1868, only ·741 of an inch fell on but 5 days.

High winds were noted on 10 days, and attained the force of a fresh or moderate gale on two occasions—viz., the 6th and 8th. Temperature reached or exceeded 70° in the screen on only 3 days. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In July, 1888, the maximum was 68·7°. Thunderstorms occurred on the 3rd and 20th.

Cyclonic conditions held over the W. and N.W. of Europe throughout the period ending Saturday, the 4th, and the weather was, therefore, very changeable and showery, with fresh south-westerly winds (at first, S., then veering to W. and N.W.). Frequent and heavy showers occurred. These were accompanied by thunder and lightning on Friday. In London a heavy fall of rain took place on Wednesday, the 1st, and again on Friday, the 3rd, when thunderstorms occurred at Aberdeen, Leith, and Cambridge, as well as in Dublin. On the last-named day, the wind drew round to N.W. and a general though temporary improvement in the weather occurred. In Dublin the thermometers in the screen fell to 50·2° on Friday. Rain fell to the amount of ·803 inch, ·401 inch being the result of Friday's thunderstorms.

During the earlier part of the week ended Saturday, the 11th, the weather was very unsettled, stormy, cold, and rainy. An improvement set in after Wednesday, the 8th; but to the close, it was very cloudy and dull, except for a few hours on Thursday afternoon, when pleasant sunshine was enjoyed. The bad weather, which was general, was brought about by the passage eastwards across the British Islands of a rather deep and complex depression which first appeared over Ireland early on the morning of Sunday, the 5th. This system at first spread out northwards, but then travelled across the North of Ireland and South of Scotland to the North Sea, where it was found on Tuesday morning. It then changed its course, moving southeastwards and finally eastwards, disappearing over the southern part of the Baltic on Friday. Meanwhile an area of high barometer came in over Ireland, causing some improvement in the weather. On Monday and Wednesday the wind reached gale-force in and about Dublin. In England heavy falls of rain and hail occurred, accompanied by much thunder and lightning. In Dublin the mean height of the barometer was 29·897 inches, pressure ranging from 29·434 inches at 4.20 p.m. of Monday (wind, S.W.), to 30·211 inches at 9 p.m. of Thursday (wind, N.N.W.). The corrected mean temperature was 55·9°. The mean of the dry bulb readings at 9 a.m. and 9 p.m. was 55·4°. The screened thermometers fell to 46·8° on Friday. The rainfall was ·494 inch on three rainy days. Of this quantity ·213 inch fell on Monday.

A very great improvement was noticed in the weather of the week ended Saturday, the 18th except in Scotland, where it became rainy after Wednesday, when a depression approached Great Britain from Germany. Atmospherical pressure was high, but of unstable equilibrium, during the first part of the week. On Tuesday morning a depression formed over Germany, whence it began to travel slowly northwestwards, its centre reaching Berlin on Wednesday morning, the middle of the North Sea on Thursday, and the Hebrides on Friday. It caused heavy rains at first in Germany, Denmark, and Holland, then in the N.E. of England and the E. and N. of Scotland. On Friday, a secondary low pressure system moved northwestwards from the Bay of Biscay towards Ireland, where it caused a heavy fall of warm rain during the ensuing night. The S.W. winds in the rear of these disturbances brought a great increase of temperature to the British Islands. On the whole, fair summerlike weather prevailed throughout the week. In Dublin the mean height of the barometer was 30·024 inches, pressure rising to 30·365 inches, at 9 a.m. of Tuesday (wind, N.E.). The corrected mean temperature was 61·2°, or 5·5° above the value for the previous week. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 61·1°. The thermometers in the screen rose to 72·8° on Thursday. The rainfall was ·213 inch on two days—·132 inch being referred to Saturday.

In the British Islands the weather of the week ended Saturday, the 25th, was distinctly of a changeable and very broken character. Thunderstorms occurred in England on Sunday, Tuesday, and Wednesday—in Dublin on the evening of Monday, the 20th; while heavy rains fell in Scotland, and frequent heavy showers with strong winds—first from S.W., and afterwards from N.W.—were experienced in Ireland. As was to be expected under these circumstances, temperature ruled rather low throughout at all British and Irish stations. Until Tuesday evening, the barometer was low to the N.W. of the British Islands, relatively high over the Peninsula, France, and Germany—hence the fresh S.W. winds of the earlier part of the week. On Wednesday morning the lowest pressure was found off the E. of Scotland and N.E. of England, so that northerly to westerly winds prevailed. This state of things continued until Friday, when the barometer rose, except in the N. of Scotland, and the weather became dry while continuing cool and rather cloudy. In Dublin the mean height of the barometer was 29·998 inches. The corrected mean temperature was 60·4° compared with 61·2° in the previous week. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 59·8°. The rainfall amounted to ·524 inch in four days, of which ·250 inch fell on Sunday. The prevailing winds were S.W. to N.W.

Although changeable and rather cold, with strong north-westerly and northerly winds, the weather was favourable in Ireland compared with Great Britain, where large quantities of rain fell, accompanied by thunder and lightning in many instances. Throughout the period the barometer was highest over Ireland, and between Monday, the 27th, and Friday, the 31st, gradients for N.W. and N. winds were steep, owing to the appearance of successive depressions over the North Sea and its various coasts. Hence the bad weather felt in Great Britain and the comparative immunity from the same enjoyed in Ireland. In Dublin Sunday was cloudy and drizzling at first, then summerlike. In the evening turreted cumulus was seen to S., and next day severe thunderstorms occurred in the South of England. Two fine days followed; but on Tuesday night rain fell heavily for a time. The weather then became cold and dusty, but dry—so remaining until the end of the month.

The rainfall in Dublin during the seven months ending July 31st has amounted to 10·935 inches on 92 days, compared with 15·587 inches on 118 days during the same period in 1890, 13·146 inches on 112 days in 1889, 15·994 inches on 109 days in 1888, 7·935 inches on 80 days in 1887, and a twenty-five years' average of 14·733 inches on 112·6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 1·325 inches on 18 days, compared with 1·489 inches, distributed over 18 days in 1890. Of this quantity ·255 inch fell on the 18th, and ·220 inch on the 5th. The total fall since January 1 has been 13·280 inches on 88 days.

At Cloneevin, Killiney, Co. Dublin, the rainfall in July was 1·36 inches on 17 days. Maximum, equal to ·18 inch on 3rd. The total fall since January 1 has been 8·05 inches on 84 days, compared with a six years' average of 12·996 inches on 99·49 days.

AUGUST.—An exceedingly unsettled, cool, rainy, and even stormy month—a constant succession of extensive and often deep atmospherical depressions crossing the British Islands from W. or S.W. at short intervals. The centres of these systems usually traversed the more northern districts, but on the 20th and 21st a cyclone, in which the barometer was as low as 29·15 inches, passed directly over the South of England, causing an excessive fall of rain in that district. On the 25th-26th, a depression was observed in which the barometer sunk to 28·61 inches in the North of Scotland.

The present is the third consecutive year in which August has proved an unfavourable and an inclement month.

In Dublin the arithmetical mean temperature (58·1°) was decidedly below the average (59·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 57·2°. In the twenty-six years ending with 1890, August was coldest in 1881 (M. T.=57·0°), and warmest in 1871 (M. T.=62·0°). In 1885, the M. T. was only 57·1°; in 1879 (the "cold year"), it was 57·7°; in 1887, it was 60·3°; in 1888, it was 58·2°; in 1889, 58·6°, and in 1890, only 57·2°.

The mean height of the barometer was 29·731 inches, or 0·166 inch below the corrected average value for August—namely, 29·897 inches. The mercury marked 30·217 inches at 9 p.m. on the 6th, and fell to 28·949 inches at 9 p.m. of the 25th. The observed range of atmospherical pressure was, therefore, 1·268 inches—that is, a little more than an inch and a quarter.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 57·2, or 0·4° below the value in August, 1888 and 1889, but 0·9° above the value in August, 1890. It was 1·1° below the value for July, 1891. Using the formula, *Mean Temp.=min.* + (*max.—min.* × ·47), the value was 57·8°, or 1·5° below the average mean temperature for August, calculated in the same way, in the twenty-five years, 1865–89, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 58·1°, compared with a twenty-five years' average of 59·7°. On the 11th, the thermometer in the screen rose to 69·2°—wind, W.S.W.; on the 30th the temperature fell to 45·6°—wind, S. The minimum on the grass was 38·7° on the same date.

The rainfall was 4·953 inches, distributed over as many as 25 days. The average rainfall for August in the twenty-five years, 1865–89, inclusive, was 2·825 inches, and the average number of rainy days was 15·5. The rainfall, therefore, and the rainy days were considerably in excess of the average. In 1874, the rainfall in August was very large—4·946 inches on 18 days—and in 1868 also 4·745 inches fell on, however, only 13 days; but the heaviest downpour in August occurred in 1889, when 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. In 1887, 1·520 inches of rain fell on 16 days, in 1888, 1·270 inches on 12 days, and in 1890, 2·799 inches on 19 days.

High winds were noted on as many as 13 days, and attained the force of a gale on four occasions—namely, the 12th, 25th, 26th and 31st. A thunderstorm occurred on the 9th. Thunder was heard on the 3rd and 21st. Lightning was seen on the 28th. Temperature did not once reach 70° in the screen, the maximum being 69·2° on the 11th. Hail fell on the 3rd. A solar halo was seen on the 30th, and lunar rainbows appeared on the night of the 25th.

On Saturday, the 1st, a soft W. wind and showers prevailed.

Changeable, cool, showery, and at times squally weather characterised the week ended Saturday, the 8th. During the first four days, conditions depended on an extensive depression, which travelled in a south-easterly direction across Scotland, finally reaching the Yorkshire coast, where it remained nearly stationary for two days. It caused strong N.W. and N. winds, low temperature and heavy thundershowers, accompanied by hail in some instances. This was the case in Dublin, on Monday, the 3rd. On Wednesday an area of high pressure came in over Ireland from the Atlantic, and under its influence the wind moderated and the weather became dry. The amount of cloud, however, remained large, and there was a lamentable want of sun-heat by day. On Friday, the barometer began to fall once more, while the wind backed towards W.—these sure signs of the approach of new depressions from the westward were followed by a succession of heavy showers and squalls from S.W. on Saturday, this bad weather extending to England a few hours later. In Dublin, the mean height of the barometer was 29·891 inches, pressure increasing to 30·217 inches at 9 p.m. of Thursday (wind, N.N.W.). The corrected mean temperature was 57·9°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 57.1°. The rainfall amounted to 1·646 inches on four days, ·307 inch being measured as the product of Monday's thundershowers, and ·985 inch on Sunday morning, the 9th. The prevailing winds were N.W. and N.

Throughout the week ended Saturday, the 15th, the type of atmospherical distribution was cyclonic in the north, while high pressures prevailed over the Peninsula, France, and parts of Germany. Hence the weather was unsettled in Ireland, Scotland, and the North of England; finer in the south of England, and still finer and warmer on the Continent generally. At the beginning,

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

rainstorms, accompanied by thunder and lightning, occurred in many places—the showers in Dublin on Sunday and Monday being particularly heavy—·668 of an inch of rain being measured at this station on Sunday alone. Tuesday proved warm, and in most respects summerlike, but next day the wind rose to a moderate gale from W., and this was followed by another considerable downpour of rain. Fresh breezes and light showers characterised the remainder of the week. In London a dry period occurred between Monday evening and Saturday morning. In Dublin the mean height of the barometer was 29·873 inches. The corrected mean temperature was 60·4°, the mean dry bulb readings at 9 a.m. and 9 p.m. being 1·3° lower, namely, 59·1°. The thermometers in the screen rose to 69·2° on Tuesday, the 11th. The rainfall was 1·055 inches on four days—·668 inch being measured on Sunday, when thunder occurred. The prevailing winds were W. and W.N.W.

As for the week ended Saturday, the 22nd, except on Sunday, which was fine and bright at first, although cloudy and threatening in the evening, the weather was eminently unsettled, cloudy, cold, rainy, and at times blustering—quite unlike the middle of August. On Sunday long fan-like sprays of cirriform cloud spread across the sky from the westward, heralding the approach of an extensive depression to our North-west Coasts. Under the influence of this system, the wind freshened from southerly (S.E., S., and S.W.) points, and rain fell generally and in places in large quantities from day to day. The centre of lowest pressure remained off the W. and N.W. of Ireland until Thursday afternoon, shallow secondary depressions developing meanwhile from time to time over Great Britain so as to cause the rainy, unsettled weather to spread to that country also. On Thursday, the weather improved greatly in Ireland as a new depression of rapidly increasing intensity appeared off the S.W. of England, subsequently crossing that country in an east-north-easterly direction. This system caused downpours of rain over all the more southern parts of England, and the North of France—the largest measurements at 8 a.m. of Friday being 1·6 inches at Hurst Castle, 1·5 inches at Cambridge, and 1·4 inches in London. On this day frequent thunder-showers occurred in the neighbourhood of Dublin, where Saturday also proved dull, very wet, and inclement for the most part until 3 p.m., when the sky cleared. In Dublin the mean height of the barometer was 29·609 inches. The corrected mean temperature was 57·3°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 56·9°. Rain was measured every day, the total amount being 1·171 inches, of which ·451 inch was referred to Monday. Thunder occurred frequently on Friday.

As regards the week ended Saturday, the 29th, the record is once more one of very unseasonable broken weather—high winds, low temperatures, and frequent rainfalls being the leading features of the period. This week will be memorable in particular for the passage across the British Islands of what will probably be found to be the deepest atmospherical depression ever observed in August. It is true that deep cyclonic systems pass almost periodically across North-western Europe during the last week of August, but none so deep as that which swept over the British Islands on Tuesday night had appeared during the previous 30 years at least. On the 31st of August, 1876, the barometer sank to 28·920 inches at Shields; on the 28th in 1879, it fell to 29·111 inches in Dublin, and to 28·740 inches at Mullaghmore, Co. Sligo; on the 25th, in 1881, it fell to 29·014 inches in Dublin, and to 28·880 inches at Leith. But on Tuesday night, the 25th, 1891, it sank by 9 p.m. to 28·949 inches in Dublin, and at 8 a.m. next morning it read only 28·61 inches at Sumburgh Head in the Shetlands. The accompanying gales were violent in the extreme—in Dublin almost a tempest blew from S.W. between midnight and 3 a.m. of Wednesday, the 26th. The week generally was inclement, but on Wednesday and Saturday conditions improved for the time being. In Dublin the mean height of the barometer was 29·572 inches, pressure varying between 28·949 inches at 9 p.m. on Tuesday (wind, S.S.W.), and 30·046 inches at 9 p.m. of Saturday (wind, W.N.W.). The corrected mean temperature was 55·8°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 55·6°. Rain fell on seven days to the total amount of ·882 inch, of which ·332 inch was referred to Monday and ·278 inch to Tuesday. The prevailing winds were S.W. and N.W.

Sunday, the 30th, was at first fine and bright, but cold, the thermometer falling in the shade during the early morning to 33° at Nairn, 35° at Stornoway and Wick, 38° at Aberdeen, and 39° at Loughborough. In Dublin the minimum was 45·6°, at Parsonstown it was 42°. In the afternoon, the sky became overcast, and rain again set in. On Monday, the 31st, there was a moderate or fresh S.W. gale, with heavy showers, but a high temperature in Dublin.

The rainfall in Dublin during the eight months ending August 31st has amounted to 15·888 inches on 117 days, compared with 9·455 inches on 96 days during the same period in 1887, 17·264 inches on 121 days in 1888, 18·893 inches on 134 days in 1889, 18·386 inches on 137 days in 1890, and a 25 years' average of 17·558 inches on 128·1 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in August, 1891, was 4·385 inches, distributed over 24 days. Of this quantity 1·250 inches fell on the 17th, and ·475 inch on the 16th.

SEPTEMBER.—In the three preceding years, September proved a fine month. In the present year, it was a fine month compared with August; but both at the opening and close the weather was particularly unsettled, showery, and squally. A period of beautiful, summer-like weather accompanied an anticyclone which spread out north-westwards from the Continent over the British Islands in the week ending Saturday, the 12th. This month was remarkable for the frequency of auroral displays, particularly in the far north; for a high mean temperature, and an overwhelming prevalence of south-westerly winds.

In Dublin the arithmetical mean temperature (57·6°) was decidedly above the average (55·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 56·4°. In the twenty-six years ending with 1890, September was coldest in 1886 and in 1882 (M. T. = 53·0°), and warmest in 1865 (M. T. = 61·4°). In 1880, the M. T. was as high as 58·6°; in the year 1879 (the "cold year"), it was 54·3°; in 1887,

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

it was 54·0°; in 1888, it was 54·4°; in 1889, 55·8°, or exactly the average; and in 1890, it was as high as 59·6°. So warm a September as that of 1890 had not occurred for a quarter of a century.

The mean height of the barometer was 29·902 inches, or 0·008 inch below the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·271 inches at 9 p.m. of the 15th, and fell to 29·076 inches at 9 a.m. of the 1st. The observed range of atmospherical pressure was, therefore, 1·195 inches—that is, a little less than one inch and two-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 56·4°, or only 0·8° below the value for August, 1891. Using the formula, *Mean Temp.* $=min.+(max.-min.\times\cdot476)$, the mean temperature was 57·3°, or 1·8° above the average mean temperature for September, calculated in the same way, in the twenty-five years, 1865–89, inclusive (55·5°). The arithmetical mean of the maximal and minimal readings was 57·6°, compared with a twenty-five years' average of 55·8°. On the 10th, the thermometer in the screen rose to 75·6°—wind, S.; on the 7th the temperature fell to 44·8—wind, W. The minimum on the grass was 38·7° on the 7th.

The rainfall was 2·132 inches, distributed over 18 days—the rainfall was somewhat below and the rainy days were somewhat above the average. The average rainfall for September in the twenty-five years, 1865–89, inclusive, was 2·176 inches, and the average number of rainy days was 14·7. In 1871, the rainfall in September was very large—4·048 inches on, however, only 13 days. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1888, the rainfall was only ·728 inch on 10 days; in 1889, 1·043 inches fell on 13 days; and in 1890, 2·469 inches fell on 14 days.

High winds were noted on as many as 14 days, but attained the force of a gale on only four occasions—the 1st, 21st, 26th, and 30th. A solar halo appeared on the 19th, lunar halos on the nights of the 16th and 18th. Thunder and lightning occurred on the 13th. Aurorae were observed on the 2nd, 9th, and 11th. There was a fog on the 10th.

At 8 a.m. of Tuesday, the 1st, the barometer was down to 28·58 inches at Stornoway in the Hebrides. Strong gales from points between S. and W. blew in most parts of the British Islands, and the accompanying rains were very heavy in many places. After Wednesday, the 2nd, gradients became less steep, so that the wind moderated, but showers continued to fall daily in most districts. On Saturday, the weather again broke up in Ireland. On Wednesday evening faint aurora was seen near Dublin, and the following night aurora was reported from Wick and Aberdeen. In Dublin the barometer ranged between 29·076 inches at 9 a.m. of Tuesday (wind W.S.W., fresh gale), and 30·057 inches at 9 a.m. of Saturday (wind, S.W.). Rain fell daily during the 5 first days to the total amount of ·667 inch, of which ·244 inch was credited to Tuesday, and ·383 inch to Saturday.

The week ended Saturday, the 12th, witnessed a remarkable and gratifying change from storm and rain and cold to calm, bright sunshine, and midsummer heat. This most acceptable transformation was brought about by the gradual extension westwards and north-westwards of an anticyclone, or area of high atmospherical pressure, which already at the beginning of the week was found over France and Germany. Early on Sunday morning and again on Monday night rain fell freely in Dublin, but from Tuesday onwards the weather was very fine. The last three days were summer-like in the extreme—the screened thermometers rising to 75·6°, 73·8°, and 69·8° respectively. Thursday's maximum was the highest reached in Dublin during 1891, and is to be compared with maxima of 73·8° in June, 72·8° in July, and only 69·2° in August. On this same day (Thursday) the thermometer rose to 80° at York, 82° in London, and 83° at Loughborough and Cambridge. The Loughborough maximum on Friday was 86°. The change to fair weather extended westwards only slowly, for rain fell in Munster and Connaught daily up to Thursday—the measurement at Valentia Island, in Kerry, was as much as 2·82 inches. Aurora borealis was seen on the evenings of Wednesday and Friday. On Tuesday and Thursday evenings also displays of it were reported from different parts of north-western Europe. In Dublin the mean height of the barometer was 29·998 inches, pressure increasing intermittently from 29·767 inches at 9 a.m. of Sunday (wind W.) to 30·122 inches at 9 p.m. of Thursday (wind calm). The corrected mean temperature was 60·2°, or 4·0° above that of the previous week. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 58·5°. The thermometers in the screen rose to 75·6° on Thursday, having fallen to 44·8° on Monday. Rain fell to the amount of ·110 inch on Monday night.

Although changeable, and cloudy and squally at times, the weather of the period ended Saturday, the 19th, was on the whole favourable to both health and agriculture. At the beginning a V-shaped depression came in over Ireland from the south-westward, subsequently travelling in a north-easterly direction across this country on Sunday, Great Britain on Monday, and Norway on Tuesday. In front of the "trough" of low pressure the wind was southerly, temperature was high, and rain prevailed accompanied by a good deal of thunder and lightning. In Dublin distant thunder was heard on Sunday afternoon and frequent lightning was seen towards N.W. after dark. The rainfall attending this system was not heavy in Ireland or England, but in Scotland and Norway it was considerable. As the "trough" passed away, the wind shifted to N.W., with a fall of temperature, clearing sky, and bracing air. During the rest of the week, fresh W. and S.W. winds, clouds, and showers were prevalent, an anticyclone over France and Germany causing rather steep gradients for such winds in Ireland and Great Britain. In Dublin the mean height of the barometer was 29·979 inches, pressure ranging from a minimum of 29·717 inches at 9 p.m. of Sunday (wind S.) to a maximum of 30·271 inches at 9 p.m. of Tuesday (wind W.). The corrected mean temperature was 591°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 58·1°. The thermometers in the screen rose to 67·7° on Sunday and fell to 52·1° on Saturday. The rainfall measured ·762 inch on three days. Of this quantity, ·187 inch fell on Sunday, the 13th, and no less than ·563 inch on Saturday night and the early morning of Sunday, the 20th. Lunar halos were seen on the evenings of Wednesday and Friday, a solar halo on Saturday forenoon. The prevailing wind was westerly.

During the week ended Saturday, the 26th, cyclonic conditions and unsettled weather held over the British Islands, except on Thursday and Friday, when an anticyclone spread north-westwards over England from the Continent. But the beginning and close of the week showed a remarkable contrast as regards the area and distribution of the bad weather. In the interval between the evenings of Saturday, the 19th, and of Tuesday, the 22nd, a serious depression travelled north-eastwards across England to the North Sea, which it reached on Monday morning, and then southwards down the East coast of England, finally disappearing over the East of France on Wednesday, the 23rd. This disturbance caused northerly gales and torrents of rain in Scotland (3·6 inches at Aberdeen), Wales, and West of England, smaller quantities elsewhere, and thunderstorms at many British Stations. As the wind died down and the sky cleared, temperature fell fast at night, so that on Wednesday morning a minimum of 33° was recorded at Nairn, in Scotland. At this time, a new series of depressions began to travel north-eastwards across Ireland, where the weather became warmer, but unsettled and rainy. This renewal of cyclonic conditions reached its climax on Saturday, when a fresh gale from W.S.W. prevailed, with showers of rain. In Dublin the mean atmospherical pressure was 29·916 inches, the barometer ranging between 30·108 inches at 9 p.m. of Thursday (wind S.W.), and 29·587 inches at 9 a.m. of Saturday (wind W.S.W.). The corrected mean emperature was 54·4°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 53·4°. The thermometers in the screen rose to 64·9° on Thursday, having fallen to 45·9° on Wednesday. The rainfall was ·513 inch, of which ·196 inch was measured on Wednesday and ·188 inch on Friday. The prevailing winds were—first, northerly; afterwards, south-westerly.

The last four days—27th–30th, inclusive—were characterised by changeable, showery weather, with fresh to strong and squally winds from points between W.N.W. and S.S.W. Rain fell daily, but not in large amount, the measurement being only ·080 inch.

The rainfall in Dublin during the nine months ending September 30th has amounted to 18·020 inches on 135 days, compared with 10·968 inches on 112 days during the same period in 1887, 17·992 inches on 131 days in 1888, 19·936 inches on 147 days in 1889, 20·855 inches on 151 days in 1890, and a twenty-five years' average of 19·734 inches on 142·8 days.

At Knockdolian, Greystones, County Wicklow, the rainfall in September, 1891, was 1·957 inches, distributed over 14 days. Of this quantity ·360 inch fell on the 19th, and ·350 inch on the 23rd.

October.—October, 1891, may well be described as a month of contrasts. At the beginning some fine, warm autumnal days were experienced, interrupted indeed by a gale and heavy rain on the 5th. From the 8th to the 18th was a period of violent gales and heavy rains, with brief intervals of fine weather and very unsteady temperature. Then followed a week of low barometer, but fair weather and low temperature in Ireland, heavy rains and gales in England. The closing period, from the 25th to the 31st, was fine and quiet, with ground frosts and local fogs at night, bright and warm sunshine by day, with easterly winds.

In Dublin the arithmetical mean temperature (49·5°) was slightly below the average (49·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 48·2°. In the twenty-six years ending with 1890 October was coldest in 1880 (M. T. = 45·4°), and in 1885 (M. T. = 45·5°), and warmest in 1876 (M. T. = 53·1°). In 1886, the M. T. was as high as 52·0°; in the year 1879 (the "cold year"), it was 49·7°. In 1887, it was as low as 47·3°; in 1888, it was 49·1°; in 1889 it was only 48·1°; and in 1890, it was 51·7°.

The mean height of the barometer was 29·626 inches, or 0·214 inch below the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·647 inches at 9 a.m. of the 31st, and fell to 28·251 inches at 3.30 p.m. of the 13th. This was the lowest reading recorded in Dublin since the memorable 8th of December, 1886, when the barometer sank to 27·758 inches at 2.30 p.m. The observed range of atmospherical pressure was, therefore, not less than 2·396 inches—that is, a little less than two inches and four-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 48·2°, or 8·2° below the value for September, and 9·0° below that for August, 1891. The arithmetical mean of the maximal and minimal readings was 49·5°, compared with a twenty-five years' average of 49·7°. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·486), the value was 49·3°, or 0·2° below the average mean temperature for October, calculated in the same way, in the twenty-five years, 1865–89, inclusive, (49·5°). On the 4th, the thermometer in the screen rose to 62·7°—wind, S.S.W.; on the 25th the temperature fell to 33·0°—wind, W.N.W. The minimum on the grass was 28·0° also on the 25th; on six nights the thermometer sank to or below 32° on the grass.

The rainfall was as much as 3·590 inches, distributed over only 13 days—the rainfall was above, while the rainy days were largely below, the average. The average rainfall for October in the twenty-five years, 1865–89, inclusive, was 3·106 inches, and the average number of rainy days was 17·6. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1890 only ·639 inch fell on but 11 days, in 1884 only ·834 inch was measured on but 14 days, and in 1868 only ·856 inch on 15 days. In 1888, the rainfall was 1·227 inch on 16 days, and in 1889 no less than 4·853 inches fell on 22 days. From these figures, it will be seen that October, 1890, proved the driest on record for more than a quarter of a century at least.

Solar halos were seen on the 2nd, 7th, and 22nd. High winds were noted on 12 days, and attained the force of a gale on as many as eight occasions—the 5th, 8th, 11th, 13th, 14th, 16th, 18th, and 27th. The atmosphere was more or less foggy in Dublin on the 15th, 22nd, 23rd, 29th, and 30th. Lightning was seen on the evenings of the 1st, 6th, and 20th. Hail fell on the 17th.

Favourable weather held in Dublin during the first three days.

Strong southerly and south-westerly winds, rising to the force of a gale in different parts of

Western Europe at different times, and heavy rains, were the leading features of the weather of the week ended Saturday, the 10th. Dublin escaped the bad weather to a great and even a singular extent. Throughout the period, a large anticyclone was found over Central Russia, where the barometer stood persistently as high as 30·4 to 30·6 inches. At the same time a succession of large and deep depressions passed northwards or north-eastwards along the Atlantic seaboard of Western Europe, causing the high winds and heavy rains already mentioned. From time to time the main system of low pressure threw off secondary depressions, which travelled across England and the North Sea, so that broken weather spread to those districts also. In fact, the weather in England was much worse than that experienced in Dublin, where many fair intervals were enjoyed. On Tuesday evening lightning was seen, and thunder and lightning occurred in the S. and S.E. of England on Wednesday afternoon and night. In Dublin the mean barometrical pressure was only 29·493 inches. The barometer fell from 30·038 inches at 9 a.m. of Sunday (wind, S.S.W.), to 28·990 inches at 9 a.m. of Tuesday (wind, S.W.). The corrected mean temperature was 54·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 53·2°. The screened thermometers rose to 62·7° on Sunday, the 4th. There were gales on Monday and Thursday. Lightning was seen on Tuesday evening. A solar halo appeared next morning. The rainfall was ·907 inch on four days, the maximal fall in 24 hours being ·659 inch on Monday. The prevailing winds were S. and S.W.

A most tempestuous, cold, and rainy period—such is the record of the week ended Saturday, the 17th. No less than three barometrical depressions of the first importance travelled across the British Islands and the adjoining seas during the week, while numerous secondary depressions of less intensity were observed from time to time. The first of the prime disturbances lay to the N.W. of Ireland on Sunday morning, when the barometer was as low as 28·82 inches at Belmullet. Fresh gales from S. to S.W. and heavy rain accompanied this disturbance. Monday, the 12th, was fine but not settled, and in the evening heavy showers fell. On Tuesday the most intense of the three primary depressions mentioned above passed right over Ireland. The centre of the cyclone crossed the Co. Antrim in the evening, and the barometer fell to about 28 inches—at 6 p.m. the reading at Malin Head was 28·08 inches, and it was blowing a whole gale from E.N.E. At the same hour the barometer read 28·13 inches at Donaghadee, where there was a fresh gale from W.S.W. Thunder and lightning occurred in many places, and torrents of rain fell—particularly in Dublin (1·168 inches in 5 hours on Tuesday). The third great depression was found right over the North of Ireland at 8 a.m. of Friday, the 16th, the barometer being down to 28·87 inches near the centre. It caused sudden and violent gales with heavy falls of rain. On Saturday, the wind at last veered to N.W. and the weather moderated and brightened. In Dublin the mean height of the barometer was only 29·255 inches—pressure ranging between 28·251 inches at 3.30 p.m. of Tuesday (wind, S.W.) and 29·894 inches at 9 p.m. of Saturday (wind, W.N.W.). The corrected mean temperature was 48·6°, the mean dry bulb readings at 9 a.m. and 9 p.m. being still lower—viz., 47·2°. The thermometers in the screen rose to 57·9° on Tuesday, having fallen to 38·2° during the preceding night. Rain fell daily to the total amount of 2·437 inches. Of this quantity, 1·176 inches fell on Tuesday. Hail was noted on Saturday. The prevailing winds were S. and S.W.

As regards the week ended Saturday, the 24th, until Wednesday the weather remained in a very disturbed state in all parts of the United Kingdom. After that day, however, a marked improvement took place in Ireland and Scotland, while it remained wet and tempestuous in England until Friday. On Sunday an extensive depression passed over Ireland towards N.N.E. "surging" eastwards at the same time. A downpour of rain and violent southerly gales accompanied this disturbance, the high spring tides increasing the damage done by it along the coasts. This system had scarcely passed away when a new and still more serious depression arrived off the west coast of Ireland, where the barometer fell below 28·60 inches on Wednesday morning. And now a curious thing happened—the barometer began to rise over Ireland while it continued to fall over England. The result was that in the former country the wind moderated and the sky cleared, while strong gales and continuous rain were reported from England. The last four days were really beautifully fine on the east coast of Ireland. Winter set in with great severity in the North of Europe during this week—the 8 a.m. temperatures at Archangel were 19°, 15°, 6°, 8°, 14°, and 18°, up to Friday. In Dublin the mean height of the barometer was 29·356 inches—pressure ranging between 29·917 inches at 9 a.m. of Sunday (wind, S.S.W.) and 28·904 inches at 9 a.m. of Wednesday (wind, S.). The corrected mean temperature was 47·5°. The highest shade temperature was 56·6° on Tuesday; the lowest was 39.0° on Saturday. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 45·7°. Rain fell in measurable amount on two days, the total fall being ·244 inch, of which ·200 inch was referred to Sunday. The prevailing winds were—first, S., afterwards W. Lightning was seen on Tuesday evening.

A remarkable and most acceptable improvement in the weather was observed during the week ended Saturday, the 31st, more particularly in Ireland and Scotland. Already on Sunday an anticyclone, or area of high atmospherical pressure, was in course of formation over Scandinavia and the Norwegian Sea. This system moved gradually southwards and at the same time increased in intensity, until towards the close of the week it covered the British Islands and adjacent districts with central readings of the barometer as high as 30·74 inches. Exceptionally fine, quiet, bright weather held in Ireland after Tuesday. But up to and including that day strong easterly or north-easterly winds and much cloud prevailed, owing to the advance across the Peninsula and France of a succession of low pressure systems. These caused gloomy, wet, and stormy weather in the South of England, and heavy rainfalls in Spain and France. After Tuesday, conditions became tranquil and the sky cleared, so that sharp frosts and fogs occurred at night, while the days were sunny, dry, and bracing. At the end of the week depressions were again appearing over Northern Europe, where with a consequent shift of wind to S.W. a sudden rise of temperature took place, amounting at Haparanda, on the Gulf of Bothnia, to 33°. At that station the thermometer read—1° F. at 8 a.m. of Thursday, but—32° F. at the same hour on Friday. In Dublin the mean height of the barometer

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

was 30·296 inches, pressure steadily increasing from 29·905 inches at 9 a.m. of Sunday (wind, W.N.W.) to 30·647 inches at 9 a.m. of Saturday (wind, E.S.E.). The corrected mean temperature was 45·4°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 45·1°. The thermometers in the screen rose to 54·7° on Monday, having fallen to 33·0 on Sunday. Very light showers fell on Sunday and Tuesday, but yielded only ·002 inch of rain. There was an easterly gale on Tuesday afternoon. The prevalent winds during the week were N.E. and E.

The rainfall in Dublin during the ten months ending October 31st has amounted to 21·610 inches on 148 days, compared with 12·366 inches on 123 days during the same period in 1887, 19·219 inches on 147 days in 1888, 24·789 inches on 169 days in 1889, 21·494 inches on 162 days in 1890, and a twenty-five years' average of 22·840 inches on 160·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall was as much as 5·122 inches on 14 days. Of this amount 1·180 inches fell on the 5th, ·750 inch on the 13th, ·720 inch on the 10th, and ·680 inch on the 18th. The rainfall in October, 1890, was only ·600 inch, distributed over 13 days. Of this quantity ·160 inch fell on the 6th, and ·120 inch on the 14th. The rainfall at Greystones in October, 1889, was no less than 6·935 inches on 22 days, or more than eleven times as great as the fall in October, 1890.

From January 1st, 1891, up to October 31st, rain fell at Knockdolian, Greystones, on 140 days, to the total amount of 24·744 inches.

NOVEMBER.—Opening with a week of quiet, fine, dry anticyclonic weather, this month ultimately proved very cold and changeable. On the 11th a disastrous cyclone crossed England from S.W. to N.E., causing destructive gales from different quarters and downpours of rain in many places. After this date temperature remained low to the end of the month, with one or two passing exceptions, and rain fell frequently, though not as a rule, heavily.

There was an overwhelming preponderance of south-westerly wind during the month, but the sky—at least in Dublin—was often clear, and temperature ruled low.

In Dublin the arithmetical mean temperature (43·4°) was decidedly below the average (44·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 42·8°. In the twenty-six years ending with 1890, November was coldest in 1878 (M. T. = 38·2°), and in 1870 (M. T. = 42·2°), and warmest in 1881 (M. T. 50·3°). In 1886 the M. T. was as high as 46·4°; in the year 1879 (the "cold year") it was 43·9° in 1887, it was as low as 42·6°; in 1888, it was as high as 47·5°; in 1889, it was 46·4° and in 1890, it was 45·3°.

The mean height of the barometer was 29·782 inches, or 0·078 inch below the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·693 inches at 9 a.m. of the 5th, and fell to 28·524 inches at 7.30 a.m. of the 11th. The observed range of atmospherical pressure was, therefore, 2·169 inches—that is, nearly two inches and two-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 pm. was 42·8°, or 5·4° below the value for October, and 13·6° below that for September, 1891. The arithmetical mean of the maximal and minimal readings was 43·4°, compared with a twenty-five years' average of 44·7°. On the 18th the thermometer in the screen rose to 57·8° (wind, S.W.); on the 24th the temperature fell to 31·4° (wind, W.N.W). The minimum on the grass was 25·0° also on the 24th.

The rainfall was 2·911 inches, distributed over 15 days—the rainfall was above, while the rainy days were below, the average. The average rainfall for November in the twenty-five years, 1865-89, inclusive, was 2·452 inches, and the average number of rainy days was 17·0. In 1876 the rainfall in November was large—3·614 inches on 20 days; in 1872, also, 3·414 inches fell on 24 days; in 1887, 3·012 inches fell on 18 days; in 1888, 6·549 inches fell on 26 days; and in 1890, 4·212 inches fell on no less than 27 days. On the other hand, the rainfall in 1889 was only ·929 inch on 9 days; in 1870, only 1·218 inches were measured on but 11 days, and in 1879 only 1·251 inches on but 10 days.

High winds were noted on 9 days, and attained the force of a gale on 3 occasions—the 11th, 12th, and 28th. The atmosphere was more or less foggy in Dublin on the 6th, 7th, 13th, 14th, 15th, 23rd, 24th, and 25th. Sleet fell on the 26th.

The period ended Saturday, the 7th, proved to be a very uneventful week of quiet, fine, mild, but often dull weather, with easterly winds until Friday, when a shift to the westward took place. During the entire period an anticyclone lay over the British Islands. At first the centre of this system was found over the North Sea to the north-eastward of Scotland—at 8 a.m. of Sunday the barometer was as high as 30·73 inches at Aberdeen. After Wednesday, the high pressure system moved southwards, so that the easterly winds died down, giving place to calms and dull weather in Ireland and England, and to westerly winds in Norway and Scotland. On Friday, the westerly current made still greater way southwards, and on Saturday Ireland came well within the influence of a gentle S.W. wind. Owing to the large amount of cloud, radiation was much interfered with and therefore little or no frost was felt in the British Islands. In France and Germany, on the contrary, the sky was often clear, and sharp frosts prevailed—at 8 a.m. of Friday, the thermometer read 19° at Munich, and 25° in Paris. In Dublin the mean height of the barometer was 30·518 inches, pressure decreasing from 30·693 inches at 9 a.m. of Thursday (wind, E.), to 30·258 inches at 9 p.m. of Saturday (wind, calm). The corrected mean temperature was 47·7°, or 2·3° above that of the previous week. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 47·2°. On Sunday the thermometer rose to 53·8° in the screen, on Saturday it fell to 41·2°. There was no rain during the week. The prevailing wind was easterly.

No greater contrast can be imagined than that which was presented by the weather of the week ended Saturday, the 14th, to that of the previous week. Then the barometer was uniformly and continuously very high (the mean pressure being 30·518 inches), temperature was relatively high and steady, while the weather was quiet and rainless. Now, atmospherical pressure was most unstable,

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

the mean height of the barometer was 1·317 inches below that of the former week, temperature was low and unsteady, violent gales alternated with calm and fog, and rain fell in vast quantities all over the British Islands. Gradients for S.W. winds were already established at the beginning of the week, and squalls and rain were reported from time to time. On Tuesday night a very deep depression approached the British Islands from S.W., rapidly growing deeper as it advanced. In its centre the barometer fell to 28·80 inches or lower, with the result that one of the most disastrous storms of modern times swept across England. In Dublin the force of the wind was not great, but rain fell in torrents. On Thursday evening another equally deep depression arrived off the S.W. of Ireland, whence it passed off in a northerly direction. It was accompanied by strong gales and heavy rain in Ireland. Saturday was calm, damp, and foggy, and a most inclement week drew to a close with a slowly rising barometer. In Dublin the mean pressure was 29·201 inches, the barometer ranging between 29·930 inches at 9 a.m. of Sunday (wind, S.S.W.) and 28·524 inches at 7·30 a.m. of Wednesday, (wind, N.N.W.). The mean temperature was 43·6°, the mean dry bulb temperature at 9 a.m. and 9 p.m. was 42·7° The thermometer in the screen ranged between 35·9° on Saturday and 50·9° on Thursday. Rain fell on every day, the total measurement being 2·098 inches, of which 1·229 inches were registered on Tuesday.

Dull, showery, and unsettled weather prevailed at the beginning of the week ended Saturday, the 21st, except in parts of Scotland and in the north-west of Ireland, where the weather was fine and the sky clear. These conditions were brought about by the advance up the English Channel of a complex atmospherical depression during the night of Saturday, the 14th, and in the course of Sunday, the 15th. Unfortunately, this state of things led to the complete obscuration by clouds of the total eclipse of the moon, which took place on the night of Sunday; in the north-west of Ireland, however, the eclipse was seen in a clear sky. On and after Tuesday the lowest barometrical readings were again found in the north-west, so that the wind became south-westerly and temperature rose fast, with cloudy, showery weather. Gradients were not very steep, and so no gales were felt except at a few exposed coast stations. On Wednesday temperature rose to 57·8° in Dublin, and to 57° in London and at Cambridge. On Friday the low pressure area passed on to Scandinavia, and the wind drew into N.W. or N. in the British Isles, with a reduction of temperature, which became still more decided on Saturday. In Dublin the mean height of the barometer was 29·720 inches—pressure ranging between 29·352 inches at 9 a.m. of Sunday (wind, N.W. to N.) and 29·951 inches at 9 p.m. of Saturday (wind, N.W.). The mean temperature was 44·5°; the mean of the dry bulb readings at 9 a.m. and 9 p.m. was 44·1°. The thermometers in the screen rose to 57·8° on Wednesday (the highest reading recorded since October 13), and fell to 36·4° on Saturday. The rainfall was ·393 inch on four days—of this quantity, ·211 inch fell on Sunday, which was chiefly dull and wet on the east coast of Ireland.

During the week ended Saturday, the 28th, quiet, cold, but changeable weather held until Saturday, when a moderate southerly gale and heavy rain occurred in the morning. Over Western Europe in general the distribution of atmospherical pressure at first was for the most part irregular, and without steep gradients. As the amount of cloud was slight, temperature became and continued low, sharp night frosts being reported from most stations. On Wednesday a depresssion was found off the N.W. of Scotland, and cold showers of rain, sleet, and hail fell over Ireland, Wales, and parts of England and Scotland. The rainfall was not heavy except at Holyhead, where ·98 inch fell in 48 hours ending 8 a.m. of Thursday. In the wake of the depression just mentioned several shallow secondary systems passed across the British Islands. On Friday afternoon the only serious depression of the week approached Ireland from the Atlantic. It caused heavy rain and a southerly gale on Saturday morning, but the wind soon veered towards W. with a clearing sky. In front of this disturbance a considerable, but transitory, rise of temperature took place. In Dublin the mean height of the barometer was 29·722 inches, pressure ranging between 29·920 inches at 9 a.m. of Sunday (wind, N.W.) and 29·249 inches at 9 a.m. of Saturday (wind, S.S.E.). The mean temperature was 38·7°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 37·7°. The thermometers in the screen rose to 51·8° on Saturday, having fallen to 31·4° on Tuesday. Rain fell on three days to the total amount of ·359 inch—of this quantity ·280 inch was referred to Friday.

Sunday, the 29th, was a fair, bright, calm day. Monday, the 30th, was changeable.

The rainfall in Dublin during the eleven months ending November 30th has amounted to 24·521 inches on 163 days, compared with 15·378 inches on 141 days during the same period in 1887, 25·768 inches on 173 days in 1888, 25·718 inches on 178 days in 1889, 25·706 inches on 189 days in 1890, and a twenty-five years' average of 25·292 inches on 177·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in November, 1891, was no less than 5·525 inches, distributed over 15 days. Of this quantity 2·330 inches fell on the 10th, and ·850 of an inch on the 15th.

From January 1st, 1891, up to November 30th, rain fell at Knockdolian, Greystones, on 155 days, and to the total amount of 30·269 inches.

DECEMBER.—The leading features of the weather were—a preponderance of south-westerly winds, frequent gales, heavy rains, and unsteady, but often high temperature. From the 16th to the 25th, however, an anticyclone lay over England, France, and Germany, and within its central area severe cold and dense fogs with calms prevailed. Even at this time the S.W. wind and mild temperature continued on the Atlantic coasts of Ireland, Scotland, and Norway.

In Dublin the arithmetical mean temperature (43·0°) was decidedly above the average (41·3°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 42·3°. In the twenty-six years ending with 1890, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. = 36·8°), and warmest in 1865 (M. T. = 46·2°). In 1886 the M. T. was as low as 37·9°; in the year 1879 (the "cold year") it was also 37·9°. In 1887 the M. T. was 39·9°; in 1888 it was 43·6°; in 1889 it was 43·8°; and in 1890 it was 39·2°.

The mean height of the barometer was 29·818 inches, or 0·057 inch below the corrected average

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

value for December—namely, 29·875 inches. The mercury rose to 30·610 inches at 9 a.m. of the 21st and fell to 28·814 inches at 4 p.m. of the 10th. The observed range of atmospherical pressure was therefore, 1·796 inches—that is, a little more than one inch and three-quarters.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 42·3°, or only 0·5° below the value for November, and 5·9° below that for October, 1891. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·52), the value was 43·2°, or 1·7° above the average mean temperature for December, calculated in the same way, in the twenty-five years, 1865-89, inclusive (41·5°). The arithmetical mean of the maximal and minimal readings was 43·0°, compared with a twenty-five years' average of 41·3°. On the 3rd the thermometer in the screen rose to 58·0°—wind, S.W.; on the 22nd the temperature fell to 25·2° (wind, S). The minimum on the grass was 19·2° also on the 22nd. There were 6 days of frost in the screen and 15 days of frost on the grass.

The rainfall was 3·299 inches, distributed over 21 days. The average rainfall for December in the twenty-five years, 1865-89, inclusive, was 2·404 inches, and the average number of rainy days was 16·9. The rainfall, therefore, and the rainy days were decidedly above the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1872, 4·932 inches fell on as many as 24 days; and in 1868 (which was otherwise a fine and dry year), 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 of an inch was measured on 13 days; and in 1871 the December rainfall was only ·797 of an inch on 15 days. In 1885, only ·742 of an inch of rain was measured on but 10 days, but in 1886 the rainfall was 3·348 inches, distributed over as many as 21 days. In 1887 (the "dry year"), the rainfall was 1·223 inches on 19 days; in 1888, it was 2·911 inches on 17 days; in 1889, 1·554 inches fell on 15 days; and in 1890, it was 1·856 inches on 11 days.

A lunar halo appeared on the 11th, and a lunar rainbow on the 15th. Solar halos were observed on the 8th, 9th, 13th, and 14th. High winds were noted on 14 days, and attained the force of a gale on as many as 8 occasions—the 3rd, 5th, 7th, 9th, 10th, 12th, 15th, and 28th. The atmosphere was more or less foggy in Dublin on the 7th, 13th, 16th, 20th, 21st, 22nd, 23rd, 24th, and 30th. Snow or sleet fell on the 11th. Hail fell on the 10th.

During the period ended Saturday, the 5th, the weather fell into a rough and rainy state, with squally S.W. winds and high but unstable temperature. On Tuesday, the 1st, and again on Thursday, deep depression skirted the western coasts of Ireland and Scotland, with the result that southerly to westerly gales prevailed, with rainy or showery weather in all parts of the country. On Tuesday night a subsidary disturbance crossed England, where rain fell heavily. At 8 a.m. of Thursday, the barometer was down to 28·64 inches at Stornoway in the Hebrides. During the following night thunder and lightning occurred in the N.W. and N. of Ireland. Another depression passed by on Saturday, when rain fell heavily at times. One of the most striking features of the week was the high temperature experienced on Thursday, when the thermometer rose to 56° at Oxford, Cambridge, and Loughborough; to 57° in London, at Parsonstown, Shields, Leith, and as far north as Nairn; to 58° in Dublin, and to 59° at York. In Dublin the height of the barometer varied between 29·231 inches at 9 a.m. of Thursday (wind, S.S.W.) and 29·888 inches at 9 p.m. of Friday (wind, S.S.W.). Temperature in the screen rose to 58·0° on Thursday. The rainfall was ·258 inch on three days, ·195 inch being measured on Saturday. The wind was chiefly S.S.W.

Very unsettled, rough, wet weather prevailed in all districts during the week ended Saturday, the 12th. Sunday was the only thoroughly fine day, but before night cirriform cloud had overspread the sky from the westward, ushering in a deep depression, the centre of which had reached the portion of St. George's Channel between Wexford and Pembroke by 8 a.m. on Monday. A very perfect circulation of strong winds and gales round the cyclonic system was observed. The depression travelled across England and the North Sea to Northern Germany at a great rate. The accompanying rainfall was very heavy in and about Dublin, and at Shields. On Tuesday another depression advanced to the North of Scotland, but this was soon overshadowed by a much more serious disturbance, near the centre of which the barometer fell to 27·93 inches at 8 a.m. of Thursday, the 10th, at Sumburgh Head in the Shetland Islands. At this time the barometer stood at 30·32 inches at Lisbon, and 30·14 inches at Biarritz. Large quantities of rain or sleet and hail fell, and storms prevailed not only all over the British Islands, but in France, Germany, and Scandinavia also. Thunder and lightning occurred in many parts of Ireland and in the South of England. After a few hours of fair weather on Friday afternoon the weather again became wet and stormy on Saturday. In Dublin the mean pressure was 29·550 inches, the barometer ranging between 28·814 inches at 4 p.m. of Thursday (wind, W.S.W.) and 30·037 inches at 9 p.m. of Friday (wind, W). The corrected mean temperature was 44·3°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 43·3°. The screened thermometers rose to 54·2° on Thursday and fell to 33·5° on Saturday. Rain fell daily, the total amount being 2·319 inches, and ·747 inch being credited to Sunday, ·612 inch to Wednesday, and ·717 inch to Saturday. The prevailing wind was westerly.

In the course of the week ended Saturday, the 19th, the weather underwent a complete change over Western Europe. Until Wednesday, the 16th, the distribution of atmospherical pressure was cyclonic, and the weather was for the most part rough, mild, and rainy; except in the North of Scandinavia, where severe cold prevailed, the thermometer reading—12° on Sunday and—14° on Tuesday at Haparanda on the Gulf of Bothnia. In the rear of a depression, which lay over Denmark and the North Sea on Wednesday morning, the barometer rose with great rapidity, so that by 8 a.m. of Thursday a tongue of high pressure, with readings above 30·4 inches, stretched across Norway, the North Sea, England, and the English Channel, to Normandy in France. Within this zone temperature fell fast, so that sharp frost began to be felt at the inland English stations. In Ireland and Scotland, however, southerly winds prevailed and temperature remained steady or even rose. On Thursday night the thermometer fell to 22° at York and Loughborough, and to 25° at Oxford. The anticyclone

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

continued to develop until Saturday, when the barometer exceeded 30·75 inches in Holland and Belgium. In Dublin the mean atmospherical pressure was 30·629 inches, the range being from 29·011 inches at 9 a.m. of Sunday (wind, W.N.W.) to 30·497 inches at 9 a.m. of Saturday (wind, S.S.E.). The corrected mean temperature was 44·3°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 43·6°. The screened thermometers rose to 54·8° on Tuesday and fell to 37·0° on Saturday. The rainfall was ·206 inch on four days, ·100 inch being referred to Monday. The prevailing winds were W.N.W. and S.S.E.

In the fourth week (20th-26th inclusive), very intense cold, with dense fogs, prevailed over the greater part of England until Saturday. In the East of Ireland also the cold was of considerable intensity until Christmas Day, when a thaw occurred, followed by rain and moderate to fresh S.W. winds on Saturday. Over the greater part of Norway and of Scotland and on the west coast of Ireland, there was an almost complete absence of frost during the week, owing to the prevalence of a southerly to westerly air-current in those localities. The cold in England was due to an anticyclone, which first formed on Thursday, the 17th, and persisted until Friday, the 25th. One of the most striking features accompanying the calm of the anticyclone was the density and persistence of the fog in the London district. For more than 70 hours the metropolis was wrapped in Cimmerian darkness by day as well as by night. In Dublin the fog was thick at times, but much pleasant sunshine was enjoyed at intervals. The mean height of the barometer was 30·226 inches, pressure decreasing from 30·610 inches at 9 a.m. of Monday (wind, calm) to 29·341 inches, at 4 p.m. of Saturday (wind, S.W.). The corrected mean temperature was 36·1°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 34·5°. The screened thermometers fell to 25·2° on Tuesday and rose to 54·7° on Saturday. Rain was measured on two days, the total quantity being ·047 inch, of which ·038 inch fell on Saturday. The prevailing winds were S.S.E. and S. The rise of temperature towards the close of the week spread from Spain across France to the British Islands.

As compared with the previous week, the closing period (27th-31st inclusive) was much milder; but the weather was in an unsettled, showery condition for the most part. The barometer was lowest over the Norwegian Sea, highest over the Peninsula. Temperature was generally above the average for the time of year over the greater part of Europe—the excess of warmth on the Continent on Wednesday and Thursday being particularly noticeable. Rain fell frequently, sleet and hail in Scotland, with a thunderstorm at Stornoway on Tuesday evening. In Dublin the rainfall was not very heavy, but the five days all yielded an appreciable measurement. The screened thermometers rose to 52·5° on Tuesday. The prevailing winds were S.W. and W., set in on the evening of the 31st.

The rainfall in Dublin during the year ending December 31st has amounted to 27·820 inches on 184 days, compared with 27·562 inches on 200 days in 1890, 27·272 inches on 193 days in 1889, 28·679 inches on 190 days in 1888, 16·601 inches on 160 days in 1887, and a twenty-five years' average of 27·696 inches on 194·3 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in December, 1891, was 4·630 inches, distributed over 23 days. Of this quantity 1·160 inches fell on the 6th, and ·940 of an inch on the 12th.

From January 1st to December 31st, 1891, rain fell at Knockdolian, Greystones, on 178 days, and to the total amount of 34·949 inches.

Rainfall in 1891,

At 40, Fitzwilliam-square, West, Dublin.

The rainfall was only ·124 of an inch in excess of the average annual measurement of the twenty-five years, 1865–89, inclusive—viz., 27·696 inches.

F

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

It will be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches, the only approach to this measurement in Dublin being in 1870, when only 20·859 inches fell, and in 1884 when the measurement was 20·467 inches. In seven of the twenty-five years in question the rainfall was less than 26 inches, and in 1885 it was 26·614 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1886—namely, in 1872, when 35·568 inches fell on 238 days, and in 1880, when 34·512 inches were measured on, however, only 188 days.

In 1891 there were 184 rainy days, or days upon which not less than ·01 inch of rain (one hundredth of an inch) was measured. This was in defect of the average number of rainy days, which was 194·3 in the twenty-five years, 1865–89, inclusive. In 1868—the warm dry year of recent times—as well as in 1887, the rainy days were only 160, and in 1870 they were only 145. In 1868, however, the rainfall amounted to 24·935 inches, or more than 8 inches above the measurement in 1887, and even in 1870, 20·859 inches were recorded.

The rainfall in 24 hours from 9 a.m. to 9 a.m. exceeded one inch on two occasions, viz.—October 13th (1·176 inches), and November 10th (1·229 inches). On August 8th, also, nearly an inch fell (·985 inch).

Included in the 184 rainy days in 1891, are 12 on which snow or sleet fell, and 25 on which there was hail. In January hail was observed on 2 days, in March on 9 days, in April on 2 days, and in May on 8 days. Hail also fell once in June, August, October, and December. Snow or sleet fell on 3 days in January, on 7 days in March, on 2 days in May, and on 1 day in September, November, and December. Thunder occurred on nine occasions during the year—once in May and September, twice in June and July, and three times in August. Lightning was also seen on one occasion in each of the following months—viz., August and September, and three times in October.

The rainfall was distributed as follows:—1·650 inches fell on 32 days in the first quarter, 7·098, inches on 45 days in the second, 9·272 inches on 58 days in the third, and 9·800 inches on 49 days in the fourth and last quarter.

The rainfall in the first six months was only 8·748 inches, on 77 days—that is, not one-third of the year's record. In August, as much as 4·953 inches fell on 25 days.

Of the 9·800 inches which fell in the fourth quarter of the year, 3·590 inches were measured in October on, however, only 13 days, and 3·299 inches in December on 21 days.

Abstract of Meteorological Observations taken at Dublin (40, Fitzwilliam-square, West), during the Year 1891.

MARRIAGES, BIRTHS, and DEATHS *registered* in the Year 1891.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS, AND DEATHS, 1891.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the number given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	Area in Statute Acres.	Population, 1891.	TOTAL Marriages.	TOTAL Births.	TOTAL Deaths.	Births Including Illegitimate Births. Males.	Births Including Illegitimate Births. Females.	Illegitimate Births. Males.	Illegitimate Births. Females.	Deaths. Males.	Deaths. Females.	Excess of Births over Deaths.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances.

The letter W. denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, less than the deaths to the extent stated.

NOTE.—The mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit, but not reduced to mean sea level. If it be desired for any purpose to reduce them to the sea level, the approximate correction for the purpose (varying within slight limits with the pressure and the temperature) is +·[illegible].

NOTE.—This table has been constructed for the years 1801 to 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821.

1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841, according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871 as explained for the last period.

1872–81—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872–81 and 1882–91 to allow for the discrepancy between the number thus arrived at for 1881 and 1891 respectively, and the population as shown by the Census in each of these years.

AGES of the POPULATION in IRELAND according to the Census Returns of 1861, 1871, 1881, and 1891.

Periods.	Sexes.	Ages—Years. Under 1.	1 and under 5.	5 and under 10.	10 and under 15	15 and under 20.	20 and under 25.	25 and under 35.	35 and under 45.	45 and under 55.	55 and under 65.	65 and under 75.	75 and under 85.	85 and under 95.	95 and upwards.	Total.

* Thus, the number of Marriages in the Abbeyleix Superintendent Registrar's District may at once be ascertained by referring in the "*Abstract of Marriages*" to the Superintendent Registrar's District, numbered 45 (*see* page 48), and in like manner the number of Births and Deaths, of Deaths at different ages, &c., will be found by referring to the same Superintendent Registrar's District Number in the appropriate Tables.

INDEX TO REGISTRARS' DISTRICTS.

[The Number or Numbers against each Registrar's District in the Third Column refers to the page or pages in which the Total Births, Illegitimate Births, Deaths, &c., in the District during the year are given.]

APPENDIX.

REPORT on the ADMINISTRATION of the LEGAL WORK of the GENERAL REGISTER OFFICE, DUBLIN for the Financial Year 1891–92.

SIR,—I beg to report that the legal work of your Department during the year 1891–92 was administered as follows:—

During the year, in addition to a large number of cases, in which it was found that no proceedings could be taken against the responsible parties, as the legal time for doing so had elapsed, 434 offences against the Registration Acts were reported by Local Officers, and came under investigation in this department. In many of these the defaulters came forward and complied with the requirements of the law, on becoming aware that proceedings against them were in contemplation.

After careful inquiry into the circumstances and examination of the evidence available, in 164 cases prosecutions were directed against the offenders. In 69 of these the parties were convicted and punished; in 92 cases the proceedings were abandoned, the parties (in most cases) paying the costs of court and complying with the law, and in 3 cases the summonses were dismissed.

The cases dealt with included the following offences:—Neglect to register births; neglect to register deaths; neglect to furnish certificates of marriage; failure of coroner to furnish certificate of inquest; giving false information as to age at death, as to the cause of death, and as to duration of illness previous to death; giving false information as to births, viz., registering illegitimate children as legitimate, and misrepresenting date of birth; omitting to send notification of a burial to the Registrar.

The following are the details in a few of these cases:—

C. P. was prosecuted at the Metropolitan Police Court for wilfully giving false information to the Registrar of South City No. 1 District, as to the age of her child, when registering its death, with the view of obtaining, from certain Societies, moneys in excess of the amount prescribed by the Friendly Societies' Acts. She was convicted, and fined £3 or six weeks' imprisonment.

M. B. was prosecuted at Killinick Petty Sessions for having registered with the Registrar of Broadway District, an illegitimate child as legitimate. She was convicted and fined with costs.

M. D. was prosecuted at Emyvale Petty Sessions, as Caretaker of a Burial Ground, for neglecting to furnish to the Registrar of Glasslough District the notification of a burial required by sec. 17 of the 43 and 44 Vic., cap. 13. She was convicted and fined with costs.

P. M. was prosecuted at Belfast Petty Sessions for neglecting to forward to the Registrar of Belfast No. 6 District a certificate of his marriage, in accordance with sec. 11 of the 26 & 27 Vic., cap. 90. He was convicted and fined with costs.

J. M. was prosecuted at Derrygonnelly Petty Sessions by the Registrar of Ely District for neglecting to register a death in due time. He was convicted and fined with costs.

P. M. and J. G. were prosecuted at Cong Petty Sessions by the Registrar of the District for neglecting to register the births of their children. They were convicted and fined with costs.

Notwithstanding the vigorous measures adopted by the department for the punishment of offenders, several Registrars report that they believe false information is frequently given to them especially in cases of deaths.

The *modus operandi* in one class of offences appears to be as follows: when a member of a family is entered in a Friendly Society or Industrial Assurance Company, the age is frequently given as much below the real age in order to reduce the amount of the premium payable. After a time the person dies, and then the registry is effected so as to suit the statements previously made to the Society or Company.

It sometimes happens, however, that the informant overlooks the fact that the age in the register is to correspond with the age in the policy, and, in order to obtain the money, another nefarious proceeding is then necessary, viz., the making a declaration before a magistrate, altering the age correctly given in the register to an incorrect age, to agree with the age in the policy.

Printed image digitised by the University of Southampton Library Digitisation Unit
Printed image digitised by the University of Southampton Library Digitisation Unit

The greatest pains have been taken to obtain evidence in these cases to convict the offenders, but in many of them, I regret to state, for want of documentary proof of age, the case had to be abandoned, though no reasonable doubt existed that the offence had been committed.

The absence of reliable records of birth or baptism in the case of old persons, makes it exceedingly difficult to deal with them. In several cases the age of a deceased person has been successfully proved from a marriage register, giving the age at time of marriage, and in other cases the age inserted or proposed to be inserted in the register has been proved to be impossible from the records of the births or baptisms of the children of the deceased.

The Department is greatly indebted to the Inspector-General of Royal Irish Constabulary and the Commissioner of Metropolitan Police for their kind assistance in investigating these numerous and varied criminal cases.

In addition to the above mentioned, there were a number of cases during the year in which proceedings were taken under the 26 & 27 Vic., cap. 90, before the magistrates at Petty Sessions for corrections in marriage registers, the summonses in these cases being issued at the instance of local Registration Officers.

A sum of £130 was provided in the estimate to meet legal charges. The total cost of the legal service of the Department during the year was £72 8*s.* 4*d.*, of which sum £44 13*s.* 4*d.* was paid for local professional assistance and £18 3*s.* 0*d.* for mileage to the Registrars.

I am, Sir,

Your obedient servant,

R. E. Mathesson,
Barrister-at-Law.

Thomas W. Grimshaw, Esq., M.D.,
Registrar-General.
